

FW2022/2023
MOUNTAINWARE
APPAREL & FOOTWEAR

Sometimes I wonder if our approach to work is a passion bordering on obsession.

A passion that has driven us day after day since 1928.

Always keeping our focus on the summit, thinking vertically, taking inspiration from the environment that surrounds us and investing it in what we do every day: in our attention to details, in the quality of every component and in our respect for people and the environment. Our passion: the mountains.

Obsession, on the other hand, is compulsive, it's something we cannot resist and have no choice in.

Obsession is not optional. It's a state of mind, a continuous process that leads us to try innovative ways of responding to it. But obsession takes away the enjoyment, the thrill and the satisfaction of achieving great things. No, I think that for us this is not an obsession: continuously offering new products for people who travel to the mountains, for everyone who experiences them like we do, with devotion and dedication, is the greatest pleasure we have. **Technicality for us is not an obsessions. It's pure joy.**

“Mountain Mentality” is how we call it here at La Sportiva. This is our approach, for each and every detail, solution and process. Every product is created with a highly specific purpose. We look at every aspect of being in the mountains, seeking to meet even the tiniest requirement from the most demanding enthusiast in the knowledge that we have contributed to their enjoyment in those exceptional moments.

Snow, rocks and ice are the playground for some of our most innovative TECH WINTER products. Our new ski touring boots - **Skorpius, Solar and Stellar** - are really simple and easy to put on with their BOA® Fit System technology. **G-Tech** is the ultra-technical boot for mixed and ice climbing, and there's **Cyklon Cross**, the winter running shoe for running in all kinds of weather. The right product for every type of terrain - the perfect adventure partner for every customer. All supported by the best materials in the **Tech Apparel** field. Recycled-fibre performance fabrics, attention to detail and the highest quality components all lead to a technical experience and a comprehensive **total look**.

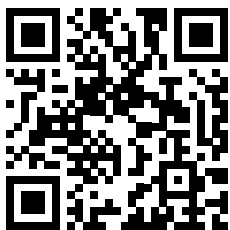

At La Sportiva, passion and technicality tend to coincide: one defines the other.

Focused passion, since 1928.

ENVIRONMENT & SOCIAL CARE

For 90 years, La Sportiva has been located within the fascinating scenery of **Val di Fiemme**, at the foothills of the Dolomites - the natural heritage of humanity. Such an incredible location brings with it an intrinsic social and environmental responsibility which is strongly felt within the company.

By adopting specific low impact production procedures and the **ISO 9001, 14001 and OHSAS 18001 certifications**, La Sportiva continues to put respect for the environment in primary position. Eco friendly production procedures are employed at all levels including the recycling of production waste material, use of photovoltaic and solar panels to produce energy, the filtering of CO₂ emissions and the use of 100% renewable energy sources. The company has also introduced procedures which meet international socio-environmental criteria, and in 2012 became a **Bluesign® Member**, presenting the **first entirely Bluesign® certified products in 2014** (base layers, apparel collection).

Since 2013 the company has supported EOCA, the international non-profit organization which provides financial projects for the environmental conservation crucial to the worldwide eco system.

2019: La Sportiva Apparel become a member of **1% For the Planet**. Some of La Sportiva's environmental giving supports organizations like Access Fund, keeping climbing areas open and preserving access for all climbers.

SKIMOUNTAINEERING

ICONS SYSTEM

La Sportiva has always striven to offer the best possible products to mountain enthusiasts of all levels. Different needs require specific products with dedicated technical features. The following icons help to identify the key features of each garment in the collection.

FIT INDICATOR

COMFORT FIT

Loose cut to allow layering and freedom of movement

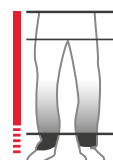

REGULAR FIT

Comfortable yet technical cut

SLIM FIT

Tapered cut for active performance

EXTRA SIZE

Adaptable fit thanks to the different leg lengths

FEATURES INDICATOR

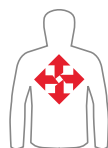

LIGHTWEIGHT

Garments made using lightweight materials

SOFT TOUCH

Silky peach hand-feel

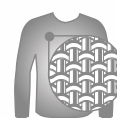

STRETCH

Comfortable, responsive garments that allow maximum freedom of movement

DURABILITY

Highly resistant products that withstand maximum wear and tear

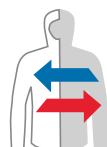

RESISTANT

Highly durable fibers

REDUCED MICROSHEDDING

Products that ensure minimal release of synthetic microfibres into the environment

BREATHABILITY

Highly breathable garments providing optimum climate control

WATER-RESISTANT

For use in strong rain, wind or snow

WIND-STOP

Garments made using wind resistant materials

INSULATION

Products that can be worn in cold temperatures

COLLECTION STRUCTURE

SKIMOUNTAINEERING, MOUNTAIN RUNNING & X-CURSION COLLECTION

L1 BASE LAYER

Lightweight and highly breathable products that provide comfort, fast drying and perfect climatic control next to your skin. The anti-bacterial treatments give you the chance to use them for multiple sessions, saving your time and water, paying respect to the environment.

L2 MID LAYER & ACTIVE PANTS

Technical products conceived for aerobic use: they provide thermal insulation for unexpected cold conditions. Functionality and versatility meet lightweight and freedom of movement, for your mountain.

L3 SOFT SHELL LAYER

Tailored products to add extra warmth, and thermal protection from wind, rain and snow. Highly breathable, they are the perfect answer to the fast changing weather conditions in the mountains.

L4 INSULATION LAYER

Comfortable and warm styles that keep the body temperature high even in extremely cold conditions. They come with Eco-friendly fabrics and filling to respect the environment. You can use them as stand alone products or adding a shell for extra customised protection.

L5 HARD SHELL

Your tailored shield against rain, wind and snow with superior breathability and waterrepellency: ideal to use in combination with an insulation layer to add extra protection. Lightweight, reliable and with strong contemporary functionalities: for your mountain.

CLIMBING COLLECTION

JKT JACKETS

Waterproof, thermal jackets providing warmth and protection when needed. Cozy styles easy to carry for your climbing adventures around the globe.

TOP TOP

Shirts for men and tops for women: everything you need as a climber to fully express your "climbing mood". All styles are made of natural, soft touch and eco-friendly materials. By climbers, for climbers.

SW SWEATERS

Designed to accompany you in your climbing journeys: provide warmth during the colder months and for your warm-up routine. Built for your everyday comfort.

SPT SHORT PANTS

The core of your climbing outfit. They bring along comfort, freedom of movement. Harness compatibility, abrasion resistance and functionality. Designed both for indoor and outdoor walls. Simply essential.

LPT LONG PANTS

Designed to meet the needs of indoor and outdoor climbing, these pants are the essential part of your climbing outfit. Clean & simple they combine lightweight, abrasion resistance, harness compatibility and functional features developed just for your climbing sessions.

La Sportiva
CARES

BLUESIGN®

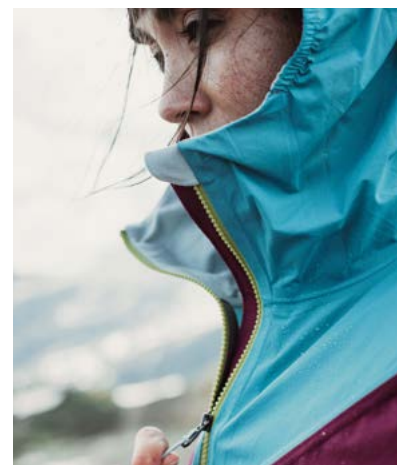

WHAT IS BLUESIGN? Bluesign® is a holistic system that provides solutions in sustainable processing and manufacturing to industries and brands. Based on strict criteria, auxiliary material and services are developed to support the company in its sustainable development.

The system behind the product sign guarantees the highest degree of control to consumers and ensures that the products were manufactured with responsible use of resources and the lowest possible impact on people and the environment.

Each textile product is the result of a comprehensive manufacturing process. The Bluesign® SYSTEM offers solutions for manufacturers of raw materials and many other components, such as dyes or chemical auxiliary materials. Suppliers can therefore have their production processes and materials composition assessed based on the Bluesign® CRITERIA optimizing sustainability.

La Sportiva is an official Bluesign® member since 2012.

This certifies that the textile supply chain complies with the internationally recognized environmental and social criteria approved by Bluesign®.

WEAR MORE. WASH LESS®

Polygiene® Odor Control Technology

Polygiene® Odor Control Technology is a durable, effective and sustainable textile treatment that uses naturally occurring silver salt to stop the growth of odor-causing bacteria. The result? You can wear more and wash less.

bluesign®
APPROVED

polygiene.com

A CLIMATE-SMART APPROACH

Up to 2/3 of a garment's environmental impact occurs during consumer use-Polygiene's unique odor-control technology allows users to wear garments longer, cutting down on the water and energy use associated with washing and drastically reducing the garment's carbon footprint and prolonging the garment's life.

WHAT WOULD YOU DO WITH 3 EXTRA DAYS?

Polygiene® keeps garments odor-free and wearable longer, saving water, energy, and time associated with repeated washing.

Skipping one load of laundry per week adds up to three days of free time over the course of one year-less washing means more time to pursue your passions.

La Sportiva RECYCLED FABRIC & INSULATION

At La Sportiva, we are outdoor enthusiasts and as such, we work hard every day to define our products down to the smallest detail, test their performances and look constantly for innovative solutions. Our Headquarters are in the mountains and we take to heart the improvement of eco-sustainable choices both in our daily work and in the product development and production processes.

We developed the **RECYCLED** logo system to communicate to customers the responsible choices we made during the product development phases, and that they can make by purchasing our products. The logo can be found throughout our apparel collection identifying items created with **RECYCLED FABRIC**, **RECYCLED INSULATION** or **RECYCLED FABRIC & INSULATION**.

RECYCLED FABRIC

We use recycled polyester and polyamide fibres. Recycled polyester fibers come from postconsumer PET bottles and recycled polyamide fibers are made with industrial waste.

- The garments carrying this logo contribute to protecting the natural resources and to reduce the environmental impact
- PFC free finishing
- Optimally and durable quality

RECYCLED INSULATION

Both in the natural and synthetic insulation our collection has now numerous styles with recycled content.

- The garments carrying this logo contribute to protecting the natural resources and to reduce our impact on the environment
- Down has been replaced with recycled down that is certified and controlled to lower our carbon footprint
- Synthetic insulation has been replaced with PRIMALOFT® Silver ECO: weightless warmth, superior water repellence and comfort
- Excellent performances in cold environments and durable body heat retention

RECYCLED FABRIC & INSULATION

This logo identifies all those items that are made of recycled materials both on the outside and on the inside.

FOCUS ON BASE LAYERS

Lightweight and highly breathable products that provide comfort and perfect climatic control next to the skin. Conceived to dry quickly, these items are processed with anti-bacterial treatments to avoid frequent washing, respecting the environment.

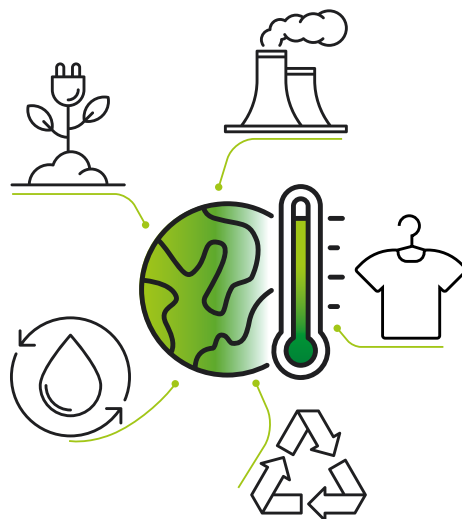

SEAMLESS PROJECT

New La Sportiva seamless products are the result of a combination of different fibers including **Amni Soul Eco®** yarn. **Amni Soul Eco®** is a polyamide yarn with enhanced biodegradability, that reduces the environmental impact and the amount of waste left to future generations. In anaerobic landfills, its unique composition facilitates access and digestion of waste material by bacteria, thus accelerating the biodegradation process. **Amni Soul Eco®** breaks down into organic matter (biomass) and biogas being eliminated from the planet in about 5 years, whilst other fibres take decades to decompose.

This technology is part of a new generation of sustainable yarns coming from processes that respects the environment.

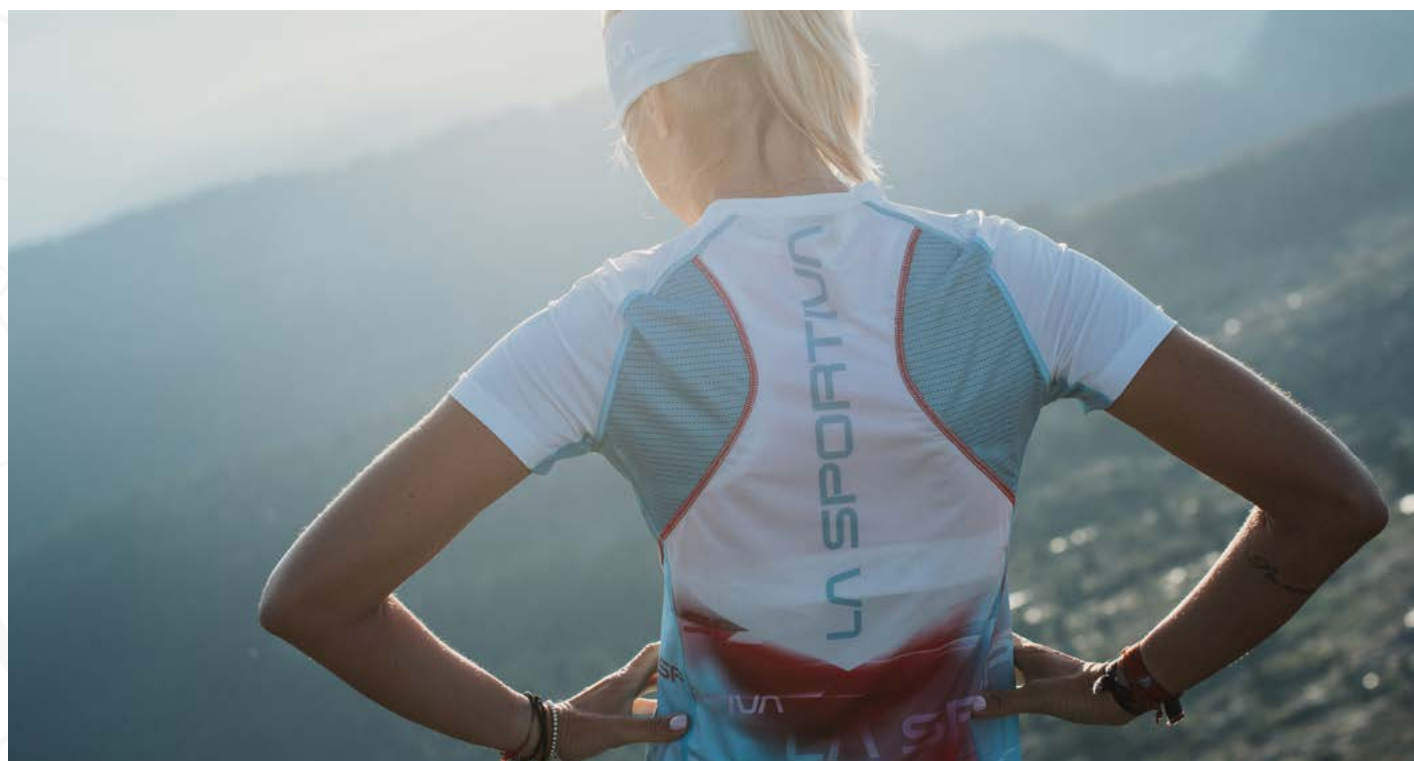

This care for the planet is present in the reuse of water used in its manufacturing process and in the reduction of greenhouse gases, which are treated prior to being released into the environment, thus preserving the ozone layer and nature.

In addition to the ecological and sustainable properties, Amni Soul Eco® meets all the users' needs, is easily dyed into different colours and offers advantages such as:

- **Soft touch**
- **Comfort**
- **Quality**
- **Moisture absorption**
- **Breathability**
- **Easy washing**
- **Fast drying**
- **Recyclability**

The elastane yarn La Sportiva decided to use in the new seamless garments is also biodegradable. Based on assessments of biodegradability, the elastane yarn breaks down in the microbiologically active soil, so we can consider it an environmentally friendly fibre. In addition, the cationic polyester blended with the other two materials give a unique tone on tone look to these styles.

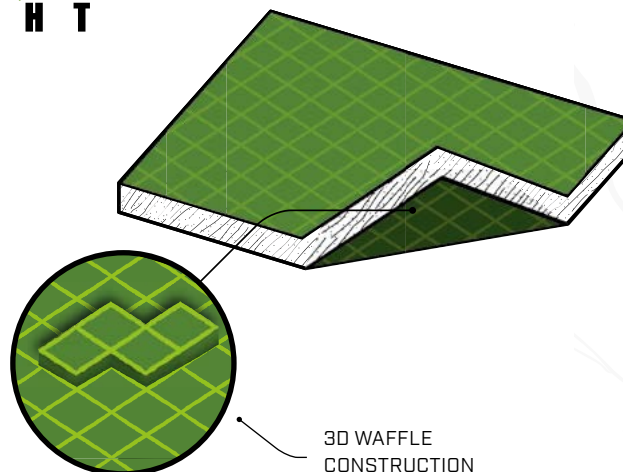

FOCUS ON MID LAYERS

A choice of fabrics made with both the needs of the active user and the care for the environment clear in our minds. Technical products conceived for aerobic use: the first barrier against unexpected weather conditions. Functionality and versatility meet lightweight and freedom of movement.

TECHSTRETCH™ LIGHT **TECHStretch** L I G H T

Lightweight performing fabric, **TECHSTRETCH™ LIGHT**, gives you freedom of movement. It's made of recycled polyester from postconsumer PET bottles, GRS certified.

Thanks to particular 3D waffle construction, this fabric keeps you warm and optimally manages moisture. Moreover, Polygiene® treatment prevents odour and bacteria formation.

TECHSTRETCH™ PRO II **TECHStretch** P R O II

A new generation of **TECHSTRETCH™ PRO** that reduce fiber microfibre shedding during garment washing.

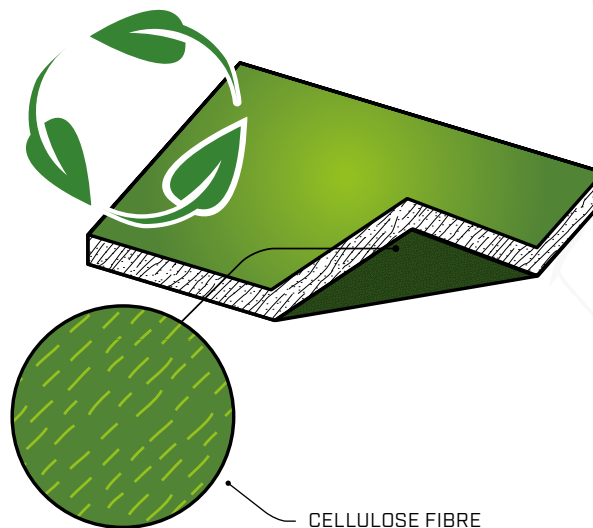

This fabric is made of recycled polyester and lyocell, the particular knitting structure contains cellulose fibre in the fabric's backing.

Usually, fabrics with brushed backing pollute the environment and generate microfibre shedding during washing.

The new **TECHSTRETCH™ PRO II** fabric blend reduces syntetic sheds.

Lyocell fibres are sourced from sustainably grown wood using a closed loop system which recovers and reuses the solvents employed in the process, minimizing the environmental impact of production. This fibres blend has unique physical properties such as stretch and resistance, efficient moisture management and a soft touch.

The new **TECHSTRETCH™ PRO II** contains also recycled polyester GRS certified that comes from postconsumer PET bottles.

FOCUS ON MID LAYERS

TECHSTRETCH™ STORM® TECHStretch STORM

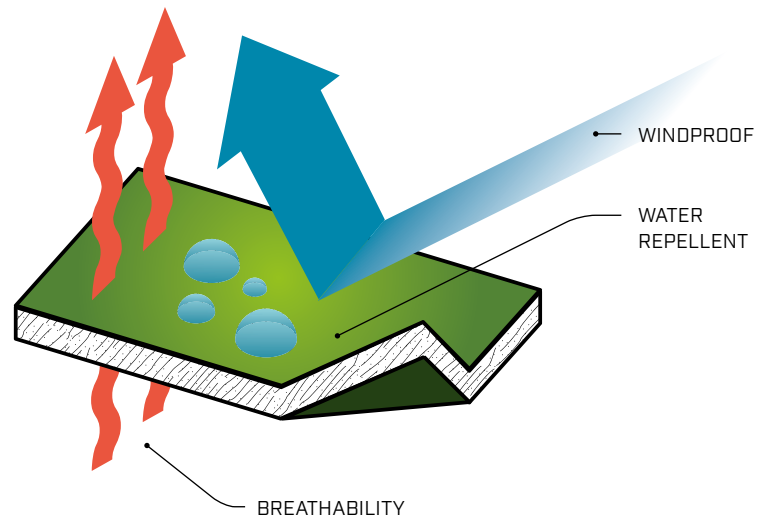

TECHSTRETCH™ STORM's unique patented single layer woven technology unites softshell and fleece into one, achieving the right balance between breathability, wind resistance and water repellency. Its densely woven surface blocks wind and water without the need of lamination making it durable over time. With its single layer construction, the fabric is lighter and less bulkier compared to 2 or 3 layer fabrics. Its soft, plush interior encapsulates warm air keeping body warm. It comes with moderate stretch for full body movement during activities while dissipating excessive heat at the same time.

This is the ideal fabric for outdoor and sports enthusiasts, for unexpected shift in weather conditions and to stay comfortably warm and dry.

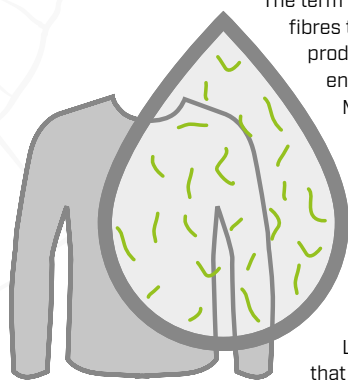

Regular 2 or 3 layer knitted fabrics tend to shed more microfibers during wash due to delamination or loose knitting. With

TECHSTRETCH™ STORM's unique single layer woven construction, fibers are tightly woven together minimizing the amount of fibers being released into water.

Single layer means no foam and no adhesive in between. It also means dyeing the fabric once. That's cutting back several steps in production - saving valuable energy and water resources.

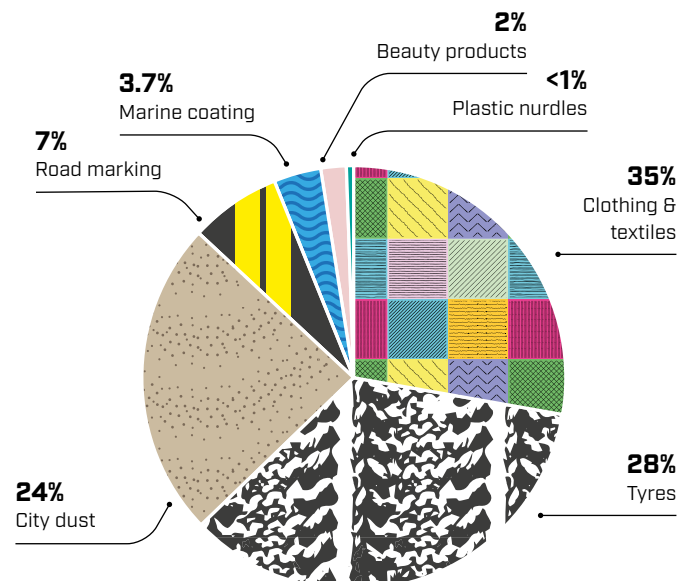

MICROFIBRE SHEDDING

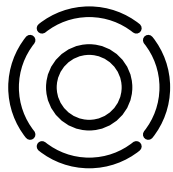

The term '**microfibre**' is currently used to describe fibres that are shed from clothing during production, consumer use, end of life and end up as pollution in the environment.

Microfibres can originate from all textiles and therefore can be comprised of both synthetic (plastic) and natural (cellulose/protein) materials. When washed, synthetic clothings shed tiny plastic fragments known as microfibres (particles less than 5 mm in size).

To prevent synthetic microfibres, La Sportiva introduced new fabrics that reduce syntethic micro-shedding.

Primary Microplastics in the Oceans

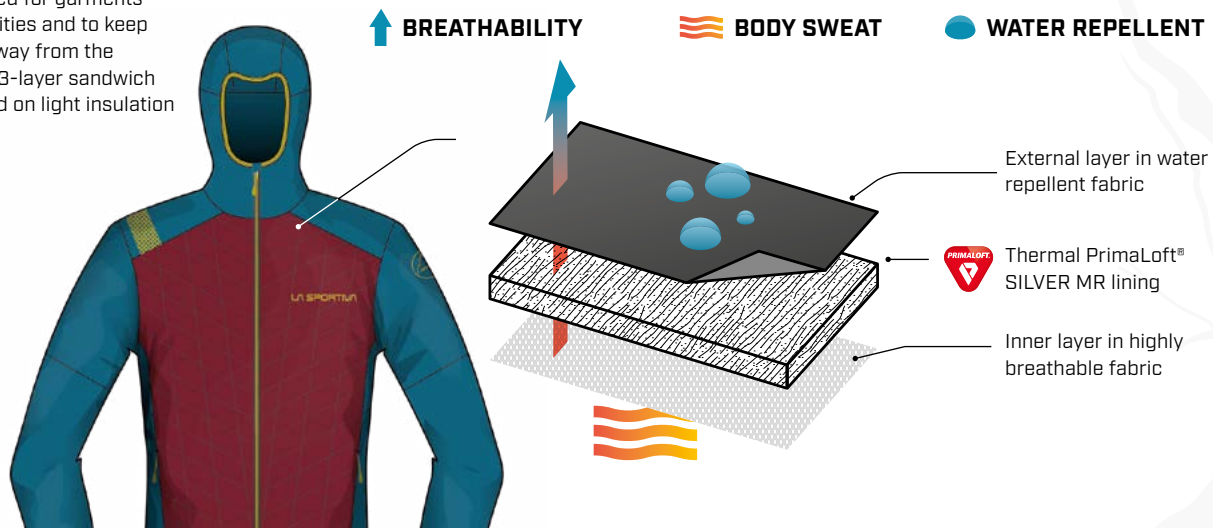

FOCUS ON INSULATION & SOFTSHELL

Products tailored to add extra warmth, and partial protection against wind, rain, and snow. Offering improved breathability, these are the essentials for the active use in the mountains.

VAPOVENT™

Not only insulation but also optimal breathability. Conceived for garments used for aerobic activities and to keep humidity and sweat away from the body, our Vapovent™ 3-layer sandwich construction is applied on light insulation layers and soft shells.

KAPOK made by Flocus™

Kapok fibre is a non-food fruit crop that can be picked from the tree on which it grows. Flocus insulation materials have similar values to down on thermal resistance, evaporation resistance, and permeability but it is lighter and retains its properties after more washes.

ACTIVE PROPERTIES OF KAPOK

- › Silky soft touch
- › Lightweight
- › Hollow kapok fiber thus insulating
- › Hypoallergenic / Antibacterial
- › Anti-moth / anti-mite
- › Waterproof / Quick dry

ETHICAL BENEFIT OF KAPOK

- › Kapok trees grow on hills in a biodiverse environment, this land is not suitable for agricultural purposes. The resulting is 100% positive impact on the environment
- › Kapok trees need no irrigation, no pesticides and no fertilisers
- › Kapok is vegan and biodegradable
- › Flocus generates an efficient eco-system which preserves water, supports poly-cropping, organically fertilises the terrain, saves agricultural land, avoids erosion and deforestation, reduces carbon and increases O2 in the atmosphere. It is completely sustainable and regenerative

PRIMALOFT® THERMOPLUME® with Cross Core™ Technology

The material scientists at PrimaLoft® have raised the standard in comfort solution technologies with PrimaLoft® Silver Insulation **ThermoPlume®** with Cross Core™ Technology. A revolutionary approach to synthetic insulation, **PrimaLoft® Silver Insulation ThermoPlume®** with Cross Core™ Technology shepherds in a new frontier of blowable synthetic insulations that deliver the fluidity, hand-feel, aesthetics and performance characteristics of natural down. 2D tufts of fiber plumes are fused with silica aerogel, an ultra-lightweight material renowned for its insulative properties.

Collectively, these plumes form a loose-fill insulation with enviable compressibility performance and thermal properties equivalent to 600 fill power down.

A proprietary finish ensures warmth even in wet conditions. Challenge what you have come to expect from your gear with PrimaLoft® Silver Insulation ThermoPlume® with Cross Core™ Technology.

PRIMALOFT® PrimaLoft® SILVER INSULATION 100% ECO

PrimaLoft® Silver Insulation – 100% PCR was designed entirely using post-consumer recycled materials to create a high performing, eco-friendly insulation.

Fibers finer than cashmere create milliowens of air-trapping pockets that keep you warm when the temperatures drop, while a proprietary water-repellent finish keeps you comfortable even when conditions get wet. Lightweight and highly compressible, PrimaLoft® Silver Insulation – 100% post consumer recycled polyester is an eco-friendly insulation that performs with a conscience.

FOCUS ON INSULATION

P.U.R.E RECYCLED DOWN®

La Sportiva choses an Italian partner to actively care for our Planet and contribute to create a sustainable future.

P.U.R.E.® PLATINUM is a fully sustainable natural down with high Fill Power value of 700+ cu.in.

P.U.R.E.® GOLD is a fully sustainable natural down with high Fill Power value of 600+ cu.in.

Excellent performances in terms of insulation, breathability, and lightness with the same potential of virgin down in terms of Fill Power and thermal insulation.

You will not feel the difference, the Planet will!

P.U.R.E.® IS THE FIRST GRS CERTIFIED RECYCLED DOWN.

PRACTICAL Down is the best insulating material in the world. It keeps you warm with the highest level of comfort.

UNIQUE P.U.R.E.® recycled down is unique by all means: it has the best fill power, fulfils the highest hygienic standards, and is GRS certified.

RECYCLED P.U.R.E.® down comes 100% from post-consumer waste, without any blending or mixing with virgin down.

ENDLESS The life cycle of down is endless. It can be collected from items that fell into disuse and get regenerated over and over without losing its insulating properties.

Million liters of water saved

The wastes are transformed in organic fertilizer

Use of renewable energy

Lower carbon footprint

CREATE SUSTAINABLE PRODUCT

REDUCE THE GLOBAL WASTE

FOCUS ON HARD SHELL

Tailored and carefully developed shields against rain, wind and snow with superior breathability and waterrepellency: ideal to use in combination with an insulation layer to add extra protection. Lightweight, reliable, with strong contemporary functionalities and eco-friendly treatments and materials. Everything for your mountain.

A premium waterproof and breathable 2.5 layers fabric developed to protect you from harsh weather conditions.

- **WATERPROOF YET BREATHABLE**

The base fabric is finished with a polyurethane (PU) resin to keep water out while releasing moisture.

- **STRETCH**

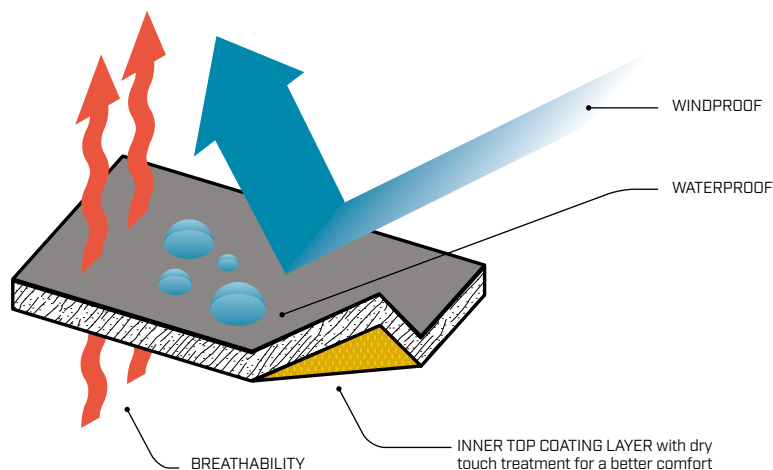

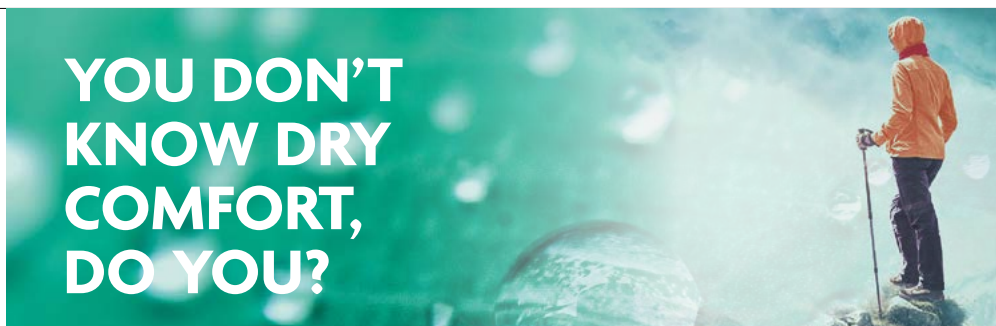

The PU resin is very elastic, which means the stretch of the fabric remains unaffected.

- **WINDPROOF**

While shutting out cold air, the PU resin helps to retain body heat.

- **PREVENTS CONDENSATION FORMATION**

The PU resin constantly absorbs, diffuses, and releases condensation.

NEW GORE-TEX® ACTIVE PRODUCTS

For fast mountaineering adventures, when the weekend holds no limits, or you skin up the backside of a mountain, you want the best possible protection, combined with next-level comfort. **GORE-TEX® ACTIVE** garments are totally windproof, extremely breathable and durably waterproof. Plus they're super lightweight, soft, and can easily be packed away.

Even for high-altitude pursuits where the chilliest of winds can bite, these garments have you protected. The innovative membrane blocks all wind while remaining extremely breathable. Moisture vapor from sweat can escape, so you stay comfortable even during the most intense high-aerobic activities, like ski touring. And of course, this membrane is also known to be durably waterproof: the **GUARANTEED TO KEEP YOU DRY™** promise means you can rely on your garment to keep all rain and snow out.

These styles are lightweight and extremely breathable, so you can go fast, go high—and keep going.

EXTREMELY BREATHABLE

LIGHTWEIGHT

DURABLE WATERPROOF

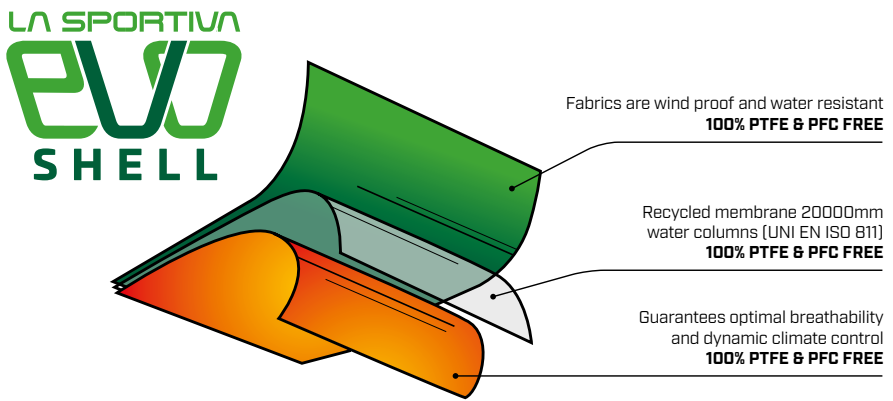

TOTALLY WINDPROOF

EVO SHELL™

Born from the continuous research process in our R&D departments, **EVO SHELL** styles represent La Sportiva's effort in bringing to the market **performant** yet **eco-friendly** products. It is a constant and ambitious evolution that needs in depth research and trustworthy partners to succeed and assure **quality, durability, and sustainability**.

To us in La Sportiva, evolution or **eco-lution**, means developing not only products meeting the need of athletes and mountain enthusiasts but also reducing our environmental impacts. The new EVO SHELL hard-shell styles are therefore **100% recycled, PFC and PTFE free**.

La Sportiva agreed to actively support this cause contributing, with each EVO Shell garment produced, to the project **“1004 · Forest protection Kasigau Wildlife Corridor”** in Kenya.

This forest is a section of dry forest and savanna in the Kasigau Wildlife Corridor and is home to endangered species such as lions, zebras, and parrots as well as countless species of birds. Every day during their seasonal migration, 2000 African elephants cross the area. However, this forest is facing massive deforestation and slash-and-burn practices.

The project was chosen as the Best Offsetting Project in Environmental Finance’s 8th voluntary carbon poll in 2017 contributing to the reach of UN Sustainable Development Goals.

SYMPATEX®

ABOUT CLIMATE NEUTRALITY

In its 2016 Risk Report, the World Economic Forum classified global warming as the biggest existential risk to humanity with the highest likelihood of occurring.

The use of **Sympatex®** fabrics and membranes, can significantly reduce the carbon footprint of products caused by the manufacturing processes.

In specific terms, this means: the production of a **Sympatex®** co-polymer, compared to others, generates 50 times less CO2* (Calculation based on Sustainable Apparel Coalition data per 1kg).

To constantly reduce its contribution to global warming, Sympatex® has also been compensating since 2017 for the CO2 quantity that is released during the annual membrane production by supporting internationally certified **climate protection projects**.

- 100% WATERPROOF**
- 100% WINDPROOF**
- OPTIMALLY BREATHABLE**
- RECYCLED**
- PFC- & PTFE-FREE**
- CO2 NEUTRAL**

SDG 3 Good Health and Well-Being	SDG 4 Quality Education	SDG 5 Gender Equality	SDG 8 Decent Work and Economic Growth	SDG 13 Climate Action	SDG 15 Life on Land
Construction of a hospital, renovation of a laboratory, support of health workshops	More than 11,000 scholarships awarded in 2019. 26 classrooms built or renovated, 2 school kitchens built, and sanitary facilities renovated	Sales channels for handicrafts made by 1200 women: 30% of project staff are female	350 new jobs e.g. in tree nurseries, healthcare, education, handicrafts and as rangers	The project protects an important carbon sink and thus the climate	Protecting 500k acres of dryland forest, thousands of threatened elephants and other species like leopards, cheetahs, lions and zebras

**THESE ARE THE CORE VALUES
OF LA SPORTIVA. SINCE 1928.**

Discovering new paths, going off
the beaten track, treading away from old
footprints, reinterpreting one's personal
limits: in this way we overcome our
mental barriers and break away from
convention and common beliefs.
Grow, challenge, evolve.

RACE

COLLECTION

NEW

STRATOS V RACING SUIT M

Stratos V Racing Suit has been renovated to guarantee high performances and a better technical quality. With lighter and more resistant fabrics, it has improved features and storage possibilities, plus a new gaiter construction to avoid snow entrance. Designed and developed together with our top athletes.

- › Light and stretch fabric
- › Concealed seams for clean design look
- › Inner pocket division

Fit: Slim**Fabric:**

Main: [PN21] 81% Polyester, 19% Elastane

Center front: [PN20] 80% Polyamide, 20% Elastane

Center back and pocket lining: [MSM02] 85% Polyester, 15% Elastane

Gaiter and shoulders: [PW16] 94% Polyamide, 6% Elastane

Sizes: XS/XL (EU) - XXS/L (USA)

Weight: 477 g (M)

L2

2 improved vertical chest pockets

Avalanche transceiver zip pocket on inside

CF zipper reversed coil #5

Front fly opening with zipper

Reinforcement inserts on abrasion areas

Transpirant back panel out of mesh

Ski-Walk mechanism compatibility with race ski-boots

High performance stretch fabric with abrasion resistant inserts

Elastic lace closure. Durable and easy to use

Organic Cotton

100% certified organic cotton yarns to respect the environment.

Techstretch LIGHT

Recycled fabric with particular 3D waffle construction, it keeps you warm and manage the moisture.

TechStretch PRO II

Ecosustainable product made of recycled polyester and lyocell. The particular knitting and the lyocell fibre reduce syntetic microfibre shedding.

TechStretch STORM

Single layer woven technology unites softshell and fleece into one, achieving the right balance between breathability, wind resistance and water repellent. Reduce microfiber shedding.

Recycled Fabric

Identifies all La Sportiva garments that are made of recycled syntetic fabrics.

Recycled Insulation

Identifies all La Sportiva garments that are filled with recycled insulation materials (natural or syntetic).

Recycled Fabric & Insulation

Identifies all La Sportiva garments that are made with and filled with recycled materials (natural or syntetic).

EVO Shell

The garments with the Evo Shell™ technology are the result of the continuous research process of La Sportiva's R&D Apparel department, committed to designing high-performance products for athletes and mountain enthusiasts while respecting the environment around us.

Idro Breath

Idro Breath is the high-performance hardshell/3-layer fabric developed by La Sportiva with PFC Free DWR treatment that guarantees elevated level of water repellence.

Vapovent™

Construction system developed by La Sportiva. Allows for optimal balance between insulation and breathability.

Vapovent™ Light

Vapovent™ Light is the evolution of our Vapovent™ 3-layer technology. Developed for active garments, this new construction made of just two layers is highly breathable, insulating, and lightweight.

GARMENT TREATMENTS

HeiQ SMART TEMP

HeiQ Smart Temp is a revolutionary textile technology that provides fabrics with the ability to interact with body temperature and dynamically respond to body heat.

Polygiene®

Polygiene® is a durable, effective and sustainable textile treatment that uses naturally occurring silver salt to stop the growth of odour-causing bacteria.

PARTNER TECHNOLOGIES AND FABRICS

Gore-Tex® Active

Totally windproof, extremely breathable, can easily be packed away and come with the **GUARANTEED TO KEEP YOU DRY™** promise. They're super lightweight and soft, and have excellent next-to-skin comfort.

PrimaLoft®

PrimaLoft® technology is engineered to protect you from the elements so you can focus on the activity at hand, empowering you to enjoy the outdoors.

SympaTex®

La Sportiva, in collaboration with Sympatex, has created the three-layer fabrics totally eco-friendly thanks to the recycled materials used and the carbon footprint neutrality project.

Aquax

A premium waterproof and breathable fabric developed to protect from wind and rain.

drirelease COTTON

Composed by 85% polyester and 15% cotton, it removes perspiration quickly and dries 4x faster than cotton.

KAPOK Kapok Made by Flocus®

Kapok insulation materials have similar values to down on thermal resistance, evaporation resistance, and permeability but they are lighter and retain their properties after more washes.

P.U.R.E. Recycled Down

P.U.R.E.® is a fully sustainable natural down. Excellent performances in terms of insulation, breathability, and lightness with the same potential of virgin down in terms of Fill Power and thermal insulation.

Amni Amni Soul ECO

Amni Soul Eco® is a polyamide yarn with enhanced biodegradability, that reduces the environmental impact and the amount of waste left to future generations.

Bluesign®

Bluesign® is a holistic system that provides solutions in sustainable processing and manufacturing to industries and brands.

HARDGOODS

SKI BOOTS

Whether you face a downhill slope on soft, powder snow, slalomming among trees, over jumps and unpredictable terrain; or you have to reach the summit as quickly as possible during a competition, La Sportiva is able to provide you with the right product for every situation in the ski alp market.

FOCUS ON SHELL AND CUFF

PEBAX® BIO-BASED SHELL & CUFF

MADE FROM RENEWABLE CASTOR BEANS

Unlike traditional petroleum-based polymers, **Pebax® Rnew®** polymers are advanced materials made from a renewable feedstock: castor beans. **Pebax® Rnew®** materials used in the ski boots are **>65% bio-based**.

The Castor bean is truly a remarkable crop:

- Grows on marginal soils
- Does not cause deforestation
- Does not compete with food
- Captures atmospheric CO2
- Provides stable revenues for farming families

Every boot powered by Pebax® Rnew® materials helps the farmers and their families sustain a better life.

UNRIVALED PERFORMANCE

The bio-based origin of the material does not induce any compromise on the performance. Pebax® Rnew® polymers are world leading high technology polymers, designed for high-end sports equipments.

Their unique properties include:

- **Lightness:** Pebax® Rnew® polymers are typically 20% lighter than most other plastics. This brings maximum comfort
- **Extreme toughness and shock resistance** for improved durability and enhanced lifespan
- **Sustained performance under extreme conditions**, especially at cold temperatures

STRATOS V P. 152

GRILAMID® 2S BIO BASED

The Grilamid® 2S by EMS Greenline is a bio polymer made out of castor oil (62%) coming from bio castor plant grown in semi arid areas of China, Brazil and India.

It has a higher level of impact resistance, excellent rigidity and it avoid the use of plastic in the chemical process.

BIO FEATURES:

- Using up to 62% of Castor Oil
- Robust annual plant
- Not competing with food crops for land
- Grown in semi arid areas (India, China, Brazil)
- Complementary to other plants such as cotton

THE STRATOSPHERIA

This concept is about putting your feet into the best ski mountaineering boots designed to be race-ready with no need for manual alterations to make them lighter before race day.

In the past, it was standard practice for athletes to shave off or remove sections of the boots before the start of the race, to make them as light as possible.

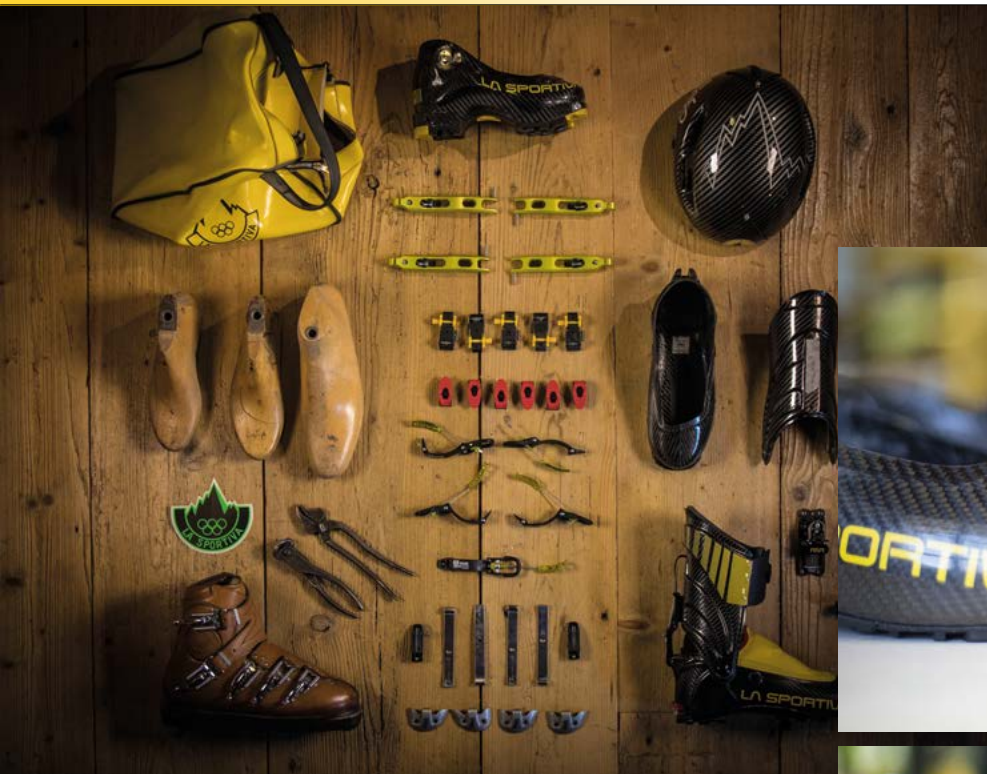

Then, **Stratos** came on the scene. The first full-carbon, super-lightweight, performance competition boot that's race-ready. At the time, this was a completely new journey. Just like ski mountaineering, the route was full of ups and downs, trial and error. It reflects La Sportiva's quintessentially artisan approach. There was constant endeavour to reach and remain at the top, with wins in the first few races, a few painful and unexpected breakages, then the European Championships, the World Cup, and the World Championships. And the work goes on each and every day in the in an artisan lab workshop within the **R&D department in Ziano di Fiemme**, nestled amongst the Dolomites, and it comes to life every winter on the slopes of our mountains.

Up there, where there's a finish line, where there are centimetres to shave off on ascents, the work of the La Sportiva race team can be found up there in the **Stratosphere**.

80*

STRATOS V is the fifth generation of the most famous full-carbon boot in its category and the most advanced and light ski mountaineering race boot available on the market today, developed in collaboration with current World Champion Michele Boscacci. The innovative ergal "Stratos Lever" is directly connected to the calf: allows to switch between walk and downhill mode with a simple movement. Geometry and carbon lamination of the shell and cuff are designed to minimize weight and volume: the new tapered shape thus obtained is extremely

compact, direct and precise on the ski, allowing maximum control of movements and a perfect transmission of power. Reinforcement ribs and bullet-proof inserts reduce the vibrations of the shell to a minimum for high-performance skiing. The super compact Spur-Heel Construction™ provides added strength, and leaves the heel free for compatibility with all types of crampons. The rear hooking system in polymeric material in the characteristic red colour, protects the shell from impact while walking. **Stratos V: V for Victory.**

SUSTAINABILITY

- + Heel and cuff flaps in Bio-Based Pebax® Rnew
- + 100% recycled lace

SHELL AND CUFF

1. **Shell and Cuff:** carbon fiber reinforced bullet-proof anti-breakage material and reinforcing ribs
2. **Locking retention system** with internal strap and adjustable tension
3. Elasticated, waterproof and highly scuff-resistant fabric gaiter

CLOSURE SYSTEM

4. The innovative ergal "**Stratos Lever**" is directly connected to the calf: allows to switch between walk and downhill mode with a simple movement
5. Ergonomic and preloaded front closing flap
6. Bushings with wear resistant system that eliminates the friction between the shell and the cuff

OUTSOLE AND BINDING COMPATIBILITY

7. Protective polymer crampon attachment shank
8. **Spur-Heel Construction™:** compact heel for crampon attachment
9. Front and rear hook compatible with all types of binding
10. **Vibram®** Litebase Sole with lugs that are compatible with the new ISMF standards
11. **S4 Insert™:** patented front plate in collaboration with SkiTrab which facilitates stepping into the ski binding and ensures stability and greater safety

LINER

12. **Stratos V liner:** two piece liner with upper part in Softech foam for maximum comfort and support and a removable lower section for ease of fit and quick drying

68*

Skorpion CR II has been designed for the most demanding ski mountaineers to take on the biggest ascents and descents across the most technical terrains and remote the most remote locations. The perfect companion for great ski races because of their superb comfort when walking - always required when tackling the most inaccessible summits with skis on your back. The bio-based **Pebax® Rnew®** shell is reinforced with carbon fiber, allowing reduced thickness without compromising the structure's strength. The result is a lightweight boot for ascents but highly rigid, supportive and efficient for descents.

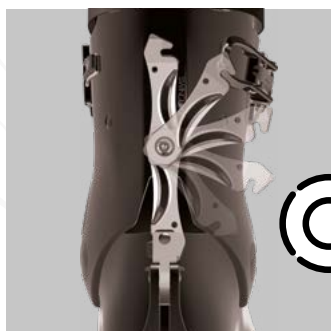

The introduction of the **BOA® Fit System** provides fine adjustments for the shell's closure, offering high precision both on ascents and descents. The **Pebax® EZ 3D Flex Tongue™** gives a wide range of movement for the ankle both on steep slopes and when crossing long stretches of flat terrain. The ski/walk **SWING-LOCK System™** closure mechanism with pivotal rotation ensures an optimal fastening speed and avoids exposing mechanical parts to accidental damage against rocks by making the most technical walking sections easier. When the summit is the goal, Skorpion CR II is the perfect companion to get you there. **For your Mountain.**

SHELL AND CUFF

- 1. Pebax®-Shell™:** made in bio-based Pebax® Rnew® reinforced super-lightweight carbon to reduce the boot's thickness and weight, without compromising the structure's strength in any way. Ergonomic, high-performance shape. Highly durable at low temperatures and excellent flexibility
- 2. Pebax®-Cuff:** cuff in bio-based Pebax® Rnew® reinforced carbon with exceptional 68° range provides maximum mobility to move safely at speed in any situation. The detachable spoiler makes it possible to completely customise the angle of movement
- 3. EZ 3D Flex Tongue™ with BOA® Fit System:** tongue in bio-based Pebax® Rnew® with joint between the upper and lower sections as well as overlap system to customise the fit. Offers a wide range of movement at the ankle both during steep inclines and when crossing sections of flat terrain
- 4. 2BT Tech Last™:** internal anatomical shaping for the perfect fit and maximum comfort. Makes it possible to achieve the best precision fit
- 5. 2BT Tech Heel™:** optimisation of heel space for a precise, comfortable fit
- 6. WarmSole™ Insert:** removable internal insole in insulating polyurethane. Avoids direct foot's contact with the internal shell, offering improved comfort and optimal heat insulation.
- 7. Progressive Grade System™:** fast adjustment system for the leg angle with spoiler insert with adjustable height.

CLOSURE SYSTEM

- 8. BOA® Fit System** super-quick and precise due to fine precision adjustments
- 9. SWING-LOCK Closure System™:** back Ski/Walk system with pivotal rotation, ensuring optimal fastening speed and avoiding the exposure of mechanical parts to damage, weather and any other external stress
- 10. EASY 2 WEAR System:** superior closure system to facilitate all fits with a single-level closure and a quick attachment/release mechanism, including a micro-metric Velcro band for small adjustments
- 11. Power Strap:** additional closure band in Velcro allowing extra adjustment to the front tension.

OUTSOLE AND BINDING COMPATIBILITY

- 12. La Sportiva Grip Guard™:** tread with abrasion-resistant toe cap/heel inserts and exceptional durability. Compatible with TECH fittings

LINER

- 13. Skorpius CR II Liner:** thermo-formable liner designed specifically to work in synergy with the shell and the cuff, providing an ergonomic, snug fit and optimal comfort. Ankle protection provided by mountings created with varying thicknesses of material

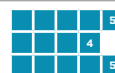

BOA® FIT SYSTEM

- DIALED IN**
Micro-adjustable precision fit.
- LOCKED IN**
Secure, custom fit for improved response and control.
- CONFIDENT**
Engineered and built to perform in the mountain's toughest conditions.

SOLAR II STELLAR II

NEW

Solar II and Stellar II are the boots dedicated to all-rounder ski mountaineers looking for the best mix of ascent and descent performance as well as comfort.

Ease of fitting and use make it a boot suitable for anyone starting out in ski mountaineering and looking for versatile, high-performance gear. The internal shape is anatomical for a perfect fit and maximum comfort. The introduction of the **BOA® Fit System** provides greater precision for an exceptional fit and really easy to use mechanism to put on and close the shell.

The cuff range of 68° gives you maximum mobility when moving at speed and safety in every situation. While the patented ski/walk system called **SWING-LOCK™** makes it really simple to move from ascent to descent modes. Solar II and Stellar II are comfortable, safe boots that are fast on ascents, high-performance and progressive on descents.

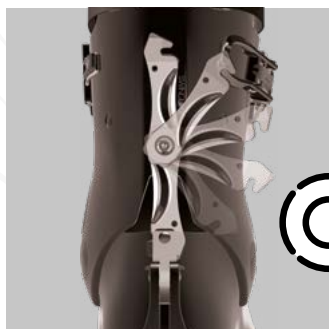

MADE IN ITALY

SUSTAINABILITY

- + Shell and cuff in Bio-Based Pebax® Rnew®

SWINGLOCK
CLOSURE SYSTEM™

SHELL AND CUFF

- 1. Pebax®-Shell™:** made from bio-based Pebax® Rnew®, Ergonomic, high-performance shape. Highly durable at low temperatures and excellent flexibility
- 2. Pebax®-Cuff:** cuff in bio-based Pebax® Rnew® with an exceptional 68° range, permitting maximum mobility to move at speed and in safety in any situation. The detachable spoiler makes it possible to completely customise the angle of movement
- 3. EZ 3D Flex Tongue™ with BOA® Fit System:** tongue in bio-based Pebax® Rnew® with joint between the upper and lower sections as well as overlap system to customise the fit. Offers a wide range of movement at the ankle both during steep inclines and when crossing sections of flat terrain
- 4. 2BT Tech Last™:** internal anatomical shaping for the perfect fit and maximum comfort. Makes it possible to achieve the best precision fit
- 5. 2BT Tech Heel™:** optimisation of heel space for a precise, comfortable fit
- 6. WarmSole™ Insert:** removable internal insole in insulating polyurethane. Avoids direct foot's contact with the internal shell, offering improved comfort and optimal heat insulation
- 7. Progressive Grade System™:** fast adjustment system for the leg angle with spoiler insert with adjustable height

CLOSURE SYSTEM

- 8. BOA® Fit System** is super fast and precise because it can make micrometric adjustments
- 9. SWING-LOCK Closure System™:** back Ski/Walk system with pivotal rotation, ensuring optimal fastening speed and avoiding the exposure of mechanical parts to damage, weather and any other external stress
- 10. EASY 2 WEAR System:** superior closure system to facilitate all fits with a single-level closure and a quick attachment/release mechanism, including a micro-metric Velcro band for small adjustments
- 11. Power Strap:** additional closure band in Velcro allowing extra adjustment to the front tension

OUTSOLE AND BINDING COMPATIBILITY

- 12. La Sportiva Grip Guard™:** tread with abrasion-resistant heel and toe cap inserts and outstanding durability. Compatible with TECH fittings

LINER

- 13. Solar II Liner:** thermo-formable liner designed specifically to work in synergy with the shell and the cuff, providing an ergonomic, snug fit and optimal comfort. Ankle protection provided by mountings created with varying thicknesses of material

HARDGOODS
SKI BOOTS

VANGUARD

Vanguard is the modern boot for enthusiastic ski mountaineers due to a perfect balance between comfort and technicality for both uphill and downhill routes, it is designed for **touring and free-touring**. Comfort, lightweight and a wide range of movement make it easy to use, intuitive during the uphill phase. Due to the innovative design and the particular construction of the upper, the boot is solid and reactive on the descent route such as boots designed for free-ride and alpine skiing. The materials used represent the state-of-the-art technology of plastic materials combined with carbon and glass fibers, taking into consideration the environmental impacts by using bio-compatible material **Pebax® Bio Based Rnew 1100**.

Each construction component allows a perfect transmission of precision and power to the ski, combined with high durability and incredible lightweight. The heart of the boot is the shell with an asymmetrical V-SHAPE™ cuff closure that combines high mobility with a very intuitive fit: easy to put on, position the boot in walk mode and open the front hooks. The ski mountaineer will appreciate the wider fit and the extremely simple closure system of the cuffs, which automatically bring the front tab into place. The inner liner in **Ultralon®** and the **Vibram® V-Lug** high durability sole, create a cutting-edge product.
Vanguard: Free the Future.

Large entrance volumes make fitting operations extremely fast and intuitive.

SUSTAINABILITY

- + Pebax® Rnew® Organic-Based shell, cuff and tongues

SHELL AND CUFF

- 1. Pebax® Shell:** comfortable and high-performance shell, made of eco-friendly material deriving from Pebax® Bio Based Rnew 1100 castor oil seeds. Very high resistance to low temperatures and excellent flexibility. ISO standard geometries
- 2. V-SHAPE™ Pebax® Cuff:** Cuff in Pebax® Bio Based Rnew 1100 with exceptional 63 ° excursion: allows for maximum mobility to move quickly and safely in any situation. Asymmetrical closure which, thanks to the particular "scissor" construction geometry and the large entrance volumes, makes fitting operations extremely fast and intuitive. For an easy and immediate fit, simply place the boot in walk mode and open the front hooks, the boot is now ready to be put on. Cuffs loaded with carbon for the version for men (FLEX 130) and glass loaded for the version for women (FLEX 115)

- 3. EZ Flex™ Double Tongue:** Pebax® tongue made of two elements (upper and lower) of two different types of stiffness, in order to combine maximum mobility in walk mode and perfect power transmission in ski mode
- 4. V-Guard Interfaces™:** abrasion-resistant reinforcement zones made of materials derived from the world of alpine skiing placed on the heel and toe for maximum durability in the attachment areas
- 5. WarmSole insert:** insulating polyurethane insole. Avoids direct contact of the foot with the shell thus, increasing warmth

CLOSURE SYSTEM

- 6. EZ-LOCK Closure System™:** the back Ski/Walk tilt system made from polymer and Ergal, ensures super quick closure and avoids exposure of mechanism to accidental damage and stress
- 7. TWIN-PWR™:** double band with upper elastic strap, combines a perfect closure with a reactive energy return while skiing, ensuring comfort and precision on downhill

- 8. Compact Buckle™:** patented lever closure system that keeps the lever adherent to the shell in walk mode, reducing external volumes, distributing tension evenly and giving maximum freedom of movement without the exposed parts of the shell getting in the way of the action of the ski mountaineer

- 9. Double Release™:** compact and precise lower closure derived from the "Spider Buckle Evo" technical solution that allows a perfect distribution of tension on the median part of the instep by acting on the high resistance Adjustable Cable™, which is anchored directly to the axes studs thus, reducing the deformation of the shell in the descent phases

OUTSOLE AND BINDING COMPATIBILITY

- 10. Vibram® V-LUGS™ Sole:** outsole that complies with the ISO UNI EN 9523 standard with anti-abrasion heel / toe inserts and exceptional durability

LINER

- 11. Vanguard LINER:** thermoformable liner specially designed to work in synergy with the shell and cuff: it allows an ergonomic and enveloping fit and optimal comfort. Malleolus protection due to slots created with materials of differentiated thickness and the use of Ultralon® Performance Foam material. It is designed for the addition of a lace to further facilitate the customization of the internal volumes. Women's version available and specifically designed for female foot morphology
- 12. La Sportiva Ski Mountaineering Organic Insole:** insole made from organic material

VEGA NEW COLOURS

Vega is the evolution of the four-buckle ski mountaineering boot dedicated to all free-rider ski mountaineers in search of the perfect combination of the power, control, resistance and precision of a downhill boot, with the mobility qualities, maneuverability and lightweight of a new generation ski mountaineering boot.

The shell is made of light and resistant Grilamid® Carbon Reinforced while the patented **Vertebra Technology™** carbon-loaded locking system forms a structural part of the boot and facilitates the transmission of downhill power thanks to the exceptional "125-Flex".

The mobility of the cuff, equal to 60° of the total excursion, combined with the accentuated rolling and the patented **EZ Flex™** hinge system of the bootie, enhances the walkability of the product, which can also be used for technical passages on rocks and slippery ground thanks to the integral Vibram® sole dual-compound/double. The dual compatibility with both race TECH and AT bindings allows excellent versatility of use.

Vega: free your pow(d)er.

SUSTAINABILITY

- + Grilamid® 2S Organic Based shell

SHELL AND CUFF

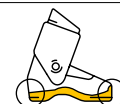

- G-Shell™:** our super-compact lower shell is only 303 mm long for a size 27.5. We use the ultra-lightweight nylon polymer Grilamid® BIO because it allows us to reduce the thickness of the lower shell wall without sacrificing stiffness or power. The innovative Rear Diffuser element powers the boot's extended range of motion. This diffuser element allows incredible best-in-category true 60° range of motion -30° rearward and 30° forward (buckles closed)
- Cuff:** the Vega's ingenious Dual-Axis Cuff™ consists of two individual elements working together:
 - 1) a Pebax® Powered® dual-density two-buckle Climbing System Control™ cuff that provides lateral control and increased ankle articulation for technical climbing;
 - 2) a Carbon Reinforced Vertebra Technology™ exoskeleton that enhances forward and rearward power transmission. The Vertebra Technology™ outer cuff is the key to the Vega's powerful 115-Flex downhill performance. There is also a removable two-position asymmetric rear spoiler for fine-tuning the forward lean angle and the position of the foot in the lower shell
- Walking Profile:** the Dual-Axis Cuff™ facilitates a long smooth stride with an extended 60° range of motion while the G-Shell™ lower component maintains compatibility for touring (AT) ski binding attachment and for tech binding as well. Low 17 mm ΔH ramp-angle for a easy natural stance and all-day comfort
- Shell Line:** reinforced area defined by the analysis of 3D models helps minimize the extent of shell deformation
- EZ Flex™ Tongue:** the Pebax® Rnew® bio-based tongue uses our EZ Flex™ hinge system derived from La Sportiva's proven mountain boot technology. This innovative design guarantees unrestricted ankle movement for steep ascents and easy striding on flat ground. An added waterproof seal under the tongue provides protection against snow, ice and water. The position of the tongue can be customized at the magnesium hinge over the top of the toe box. There are 3 positions for a total adjustment range of 4 mm to allow fine-tuning of fit and walkability
- 4BT Tech Last™:** 102.5 mm neutral flat last keeps your foot in a comfortable no-fatigue position for precision footwork on technical Ski-mountaineering terrain. Similar to the 2BT Tech Last found on the Spitfire, Sideral and Starlet but wider in the forefoot and at the base of the fifth-metatarsal for a more comfortable performance fit

- WarmSole™ Insert:** fact-rubber outsoles conduct cold up from the bottom of ski boots. The Vega sports a clever removable polyurethane ultra-lightweight insulating innersole that raises your foot up off the plastic floor of the boot

CLOSURE SYSTEM

- EZ-TECH Buckles™ (patented):** aluminum buckles with micro-adjustment arm designed to speed up closing and opening operations
- Power Strap:** the wider offset and articulated hook&loop closure securely locks the entire cuff mechanism to the leg for efficient power transmission when skiing downhill
- Vertebra Technology™:** carbon reinforced Grilamid® hardwearing ergonomic power structure that works like an exoskeleton (patent pending). It is the backbone of the cuff construction and guarantees maximum security and precision during downhill ski mode. No need for a stiff tongue, the power comes from the Vertebra when it is locked out in downhill mode
- Walk/Ski Mechanism:** bombproof design (patent pending) is easy to operate even with gloves on
- Adjustable Forward Lean:** you can tune the boot to your personal preference with this interchangeable adjustable system for regulating the inclination of the cuff in three different positions (10°, 14°, 18°)

OUTSOLE AND BINDING COMPATIBILITY

- Vibram® Outsole™:** dual density with 85 shore a inserts at the toe and heel, for easier climbing on technical passages. A special centralizing system which helps attach the boot to the bindings more quickly
- Binding compatibility:** the boots are compatible with race Tech bindings, AT touring bindings

LINER

- VEGA Liners come pre-molded:** If necessary the liners are 100% thermo-formable for those with special fit requirements

SKIS

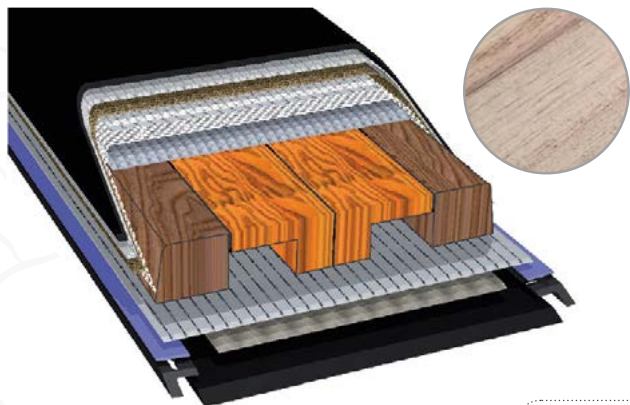

CONSTRUCTION

THE NEW MADE IN ITALY

The La Sportiva Ski line it's now more complete than ever thanks to the collaboration with **SkiTrab**. The "**Made in Italy**" brand is one of the most appreciated producer of skis and accessories specifically dedicated to the world of the ski-mountaineering. Skis and poles are now studied and created between Val di Fiemme and Bormio to offer the market the added value of the expression "**designed and made in Italy**".

THE SKITRAB TECHNOLOGIES

GARA AERO LS M / W

State of the art race skis updated in technical features and aesthetics for an even faster uphill performance and a better controlled downhill response. Based on the consolidated 14-layer construction technology, this ski is athletes' favourite for fast and lightweight competitions.

UPHILL IMPROVEMENTS

Tapered tip geometry: New shape of tip and tail for a dynamic stride

Tapered tail: Easy to insert into your Backpack's ski carry loop

Raised camber: Less contact between skin and snow when gliding uphill

DOWNHILL IMPROVEMENTS

Better control: Due to the new mounting position of the binding shifted slightly forward

Better floatation: As a result of a longer tip and tail geometry

MAESTRO.2 LS

The latest addition to the SkiTrab family, with important technical innovations like the new technical 14-layer control setting. A ski with the perfect balance - lightweight in ascent and maximum performance in descent, for skiers who want the best. Aramide core and 14-layer construction guarantee reliability and lightness. Active progressive flex, hiconnect bridge between edges and a Hibox torsion box for excellent reliability and durability.

Cap piuma quadriaxial: Core encased by compounds in 4 axial directions; the whole ski core is wrapped in a carbon or carbon/fiberglass sock, thus guaranteeing lightweight and above all a long-term high resistance, strength and reliability.

BENEFITS: long-term strength and reliability.

Differential core structure: Honeycomb compound core with differential elements to optimize strength and reliability.

BENEFITS: maximum lightweight guaranteeing strength and reliability in the more stressed area.

Steel edge: Steel edges with 52hrc +/-2 hardness microcrystalline.

BENEFITS: maximum durability and good angle control.

Fiber plate support: Multi-layered fiberglass reinforcement under the ski-binding section. BENEFITS: Maximum guarantee for the security of the ski binding screws. The skis have a particular finishing in the central part guaranteeing an excellent grip and enhanced ski steering.

Carbon reinforcements: Various layers and carbon reinforcements.

Sintered base: High molecular density sintered based. BENEFITS: excellent glide and long-term durability.

Edge radial finishing: Microfinish-grinding and perfect tuning of the edges with 89-degree side edge angle and 1-degree base edge bevel.

NEW COLOURS

Stelvio is a multipurpose ski suitable for all conditions, ideal for those looking for an easily manovrable ski to use in all types of snow, whatever the gradient. The core is made with Liwood Air and 14-layer technologies guaranteeing performance and low weight. Active progressive flex, hi-connect and no shock active vibration control offer safe and easy skiing. The version with flex 70 is for those looking for more support between the centre and the tail.

Gavia is a multipurpose ski suitable for all conditions, ideal for those looking for an easily manovrable ski to use in all types of snow, whatever the gradient. The core is made with Liwood air and 14-layer technologies guaranteeing performance and low weight. Active progressive flex, hi-connect and no shock active vibration control offer safe and easy skiing. The version with flex 6.0 is for lighter skiers or for those looking for softer and more manageable skis.

Cap piuma quadriaxial: Core encased by compounds in 4 axial directions; the ski is totally wrapped in a carbon or carbon/fiber glass shield which guarantees lightweight and above all long term durability, strength and reliability. BENEFITS: long term strength and reliability over the long term.

Wood - Care air - Canals: Lightweight wood core with air canals.

BENEFITS: guaranteed lightweight and good resistance and durability while skiing.

Steel edge: Steel edges with 52 hrc +/-2 hardness microcrystalline.

BENEFITS: maximum durability and good angle control.

Fiber plate support: Fiber plate support under the bindings section.

BENEFITS: maximum guarantee for the security of the ski bindings screws.

Carbon glass reinforcements: Various carbon, fiber-glass and hybrid reinforcements. BENEFITS: excellent resistance to torsional stress, the 14 layers of material at the tip and the tail allow for "rounder" curving.

Sintered base: High molecular density sintered base. BENEFITS: excellent glide and durability.

Edge radial finishing: Micro-finish-grinding and perfect tuning of the edges, that rectifies the 89° angle with a 1° lateral inclination.

BENEFITS: maximum turning precision easy to steer, excellent glide.

P.A. strong protection: Scratch-proof polyamide protective film.

BENEFITS: High degree of structure and design protection.

APPROACH

FOR **YOUR** MOUNTAIN

MOUNTAINEERING

Manufacturing phases in the shoe making process of La Sportiva shoes and boots

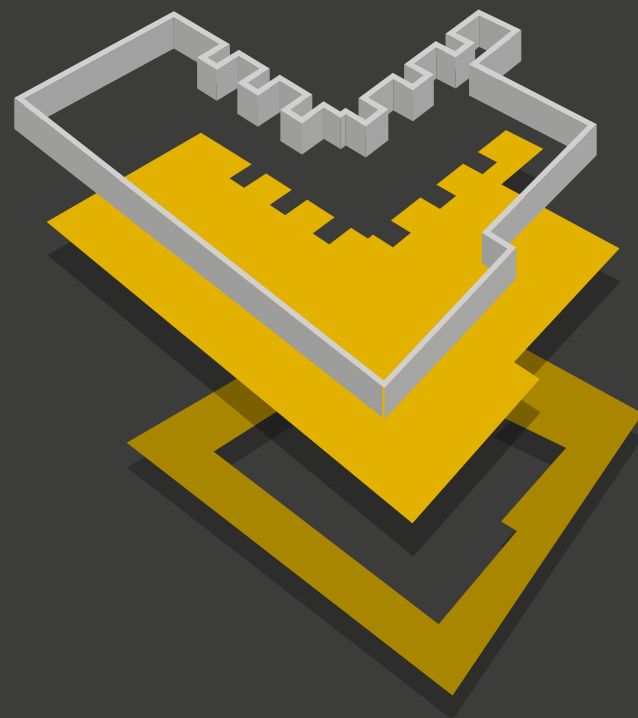

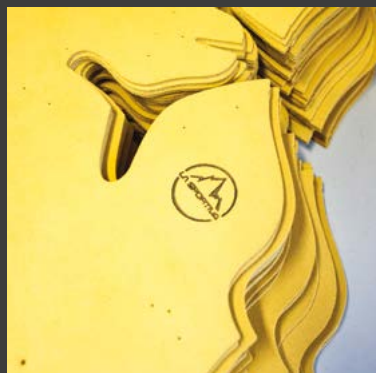

Passion and innovation, craftsmanship and technology reverberate from the cutting and sewing rhythms of the production lines of the Ziano di Fiemme plant in Trentino, at the foot of the Dolomites.

The heart and soul of La Sportiva are the more than three hundred people who shape each and every pair with their own hands.

1. Cut

This is the phase from which all the flat components that make up the shoe are obtained.

The raw materials in leather and rubber come in the form of rolls and plates: the operator selects and controls the material with his eyes and hands, positions it under the cutting blade or on automated cutting tables. The shape of the components is given by hundreds of steel punches placed by hand one after the other under the blade to obtain every single piece for every single size. The components are ready for the second phase.

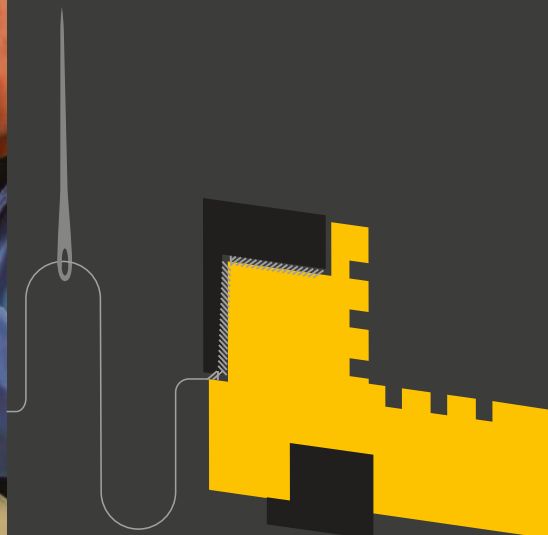

2. Stitching

The assembly by stitching of all the constructive components of the upper.

Another way to say extremely high tailoring. Sturdy leathers with a thickness varying from 1 to 3 mm and micro components are sewn by skilled hands with millimeter precision: the performance of the shoe starts from here.

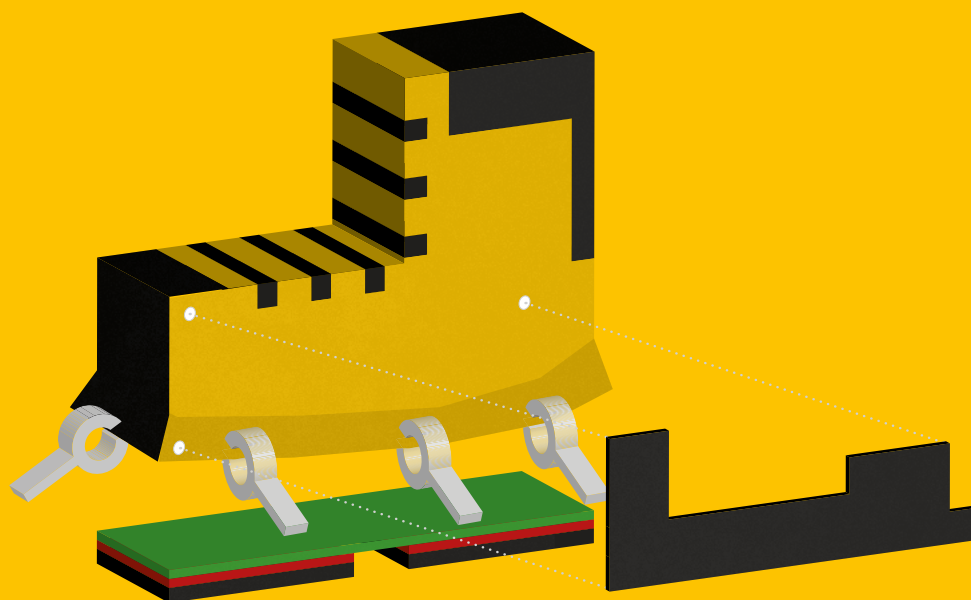

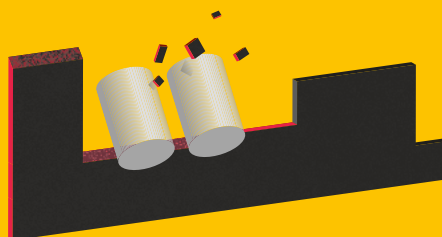

Automation reduced to a minimum: seams are three-dimensional and craftsmanship is the most advanced.

3. Skiving

This is the phase in which all the rubber components are prepared for assembly.

The skiving machines run along each single rubber edge, obtaining zones with differentiated thickness and gradual tapering by means of mechanical abrasion. Careful eyes and hands guide the process which is a crucial phase of high specialization.

4. Assembly

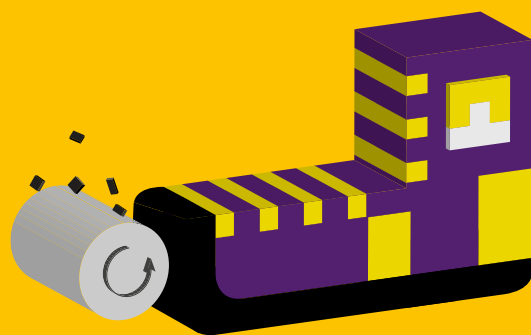

In this phase, the edges and soles are assembled on the uppers.

In a manual process supported by the latest generation of machinery, there are grafting and gluing operations of all the stiffeners on the soft part of the upper. This is where the assembly of midsoles, counters, soles, edges and reinforcements takes place: the sock obtained from the hemming is now a full-fledged shoe with every assembled component. Behind every brushstroke of glue: tightness, elasticity and flexibility of the product.

5. Grinding

The final touch: each boot and shoe is chiseled to create the correct edge of the sole, going to card (remove) the excess rubber that protrudes from the profile of the shoe.

This process is done by hand to guarantee the particular inclination that each model requires in order to perform correctly on the rock. In those millimeters there is all of La Sportiva.

A full-page photograph of a mountain climber in a dark jacket and white helmet, ascending a steep, rocky mountain face. The climber is positioned in the lower center of the frame. The background features a vast, snow-covered mountain range under a hazy, golden sky, suggesting a sunrise or sunset. A large, bold, orange text 'MOL' is partially visible on the right side of the image.

MOUNTAINEERING

Every single detail has been created and tested to the highest mountains so that nothing is overlooked.

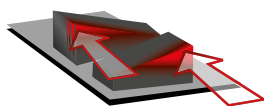

LA SPORTIVA TECHNOLOGY

IMPACT BRAKE SYSTEM

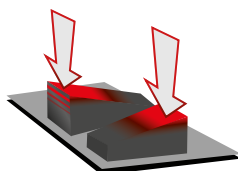

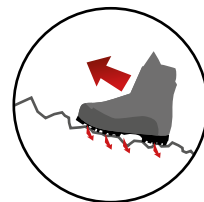

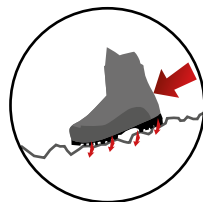

The innovative system is applied to the sole to absorb negative ground impact, help traction and improve grip downhill. Created and developed by the R&D department at La Sportiva, it offers real advantages during racing by reducing negative ground impact.

The unique position of the lugs allows as many of them as possible to come into contact with the ground, for maximum impact absorption.

BRAKE

- Enhanced braking effect
- Enhanced traction

IMPACT

- Enhanced shock absorption
- Reduced articulation fatigue

3D FLEX SYSTEM

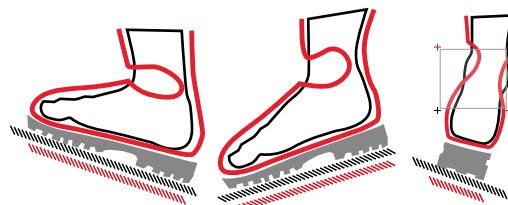

An innovative multidirectional hinge on the upper allows the ankle to make the most of its natural characteristics without losing stability.

INNOVATIVE SYSTEM 3D FLEX

- Enhanced foot control on difficult terrain
- Larger sole surface in contact with the ground
- Enhanced stability
- Even better fit
- More secure heel

/// TERRAIN

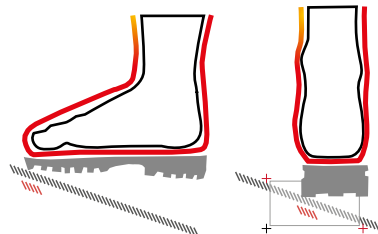

/// CONTACT SURFACE

TRADITIONAL SYSTEM

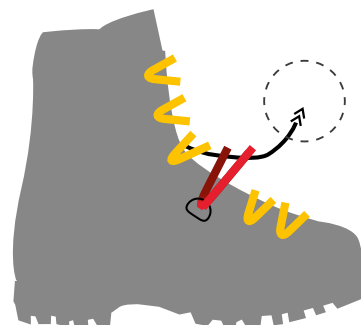

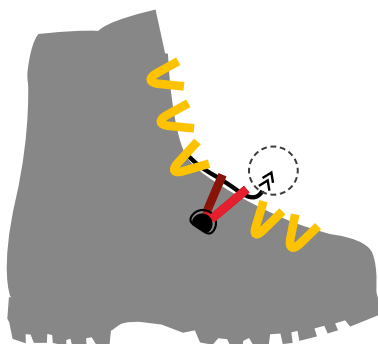

- Traditional heel block
- Stiff ankle = Less stability/Less grip

/// LOWER SURFACE AREA IN CONTACT WITH THE TERRAIN

EZ OUT

Sling that facilitates and speeds up the release of the lacing block with a single rapid movement.

GORE-TEX® MEMBRANES

THREE INNOVATIVE OPTIONS, MADE FOR EVERY ADVENTURE:

EXTENDED COMFORT

For use in moderate and warmer conditions, or during spells of higher activity where waterproofness and breathability are important. This footwear will not let water in the shoe, but will let sweat vapor escape easily. So you get outstanding heat release and comfort, even if you're moving between indoors and outdoors in warm temperatures.

PERFORMANCE COMFORT

Optimum comfort and durable waterproof protection when you need it most. This footwear is designed for outdoor use in changing weather conditions. From backpacking and hiking boots that take you around the world, to climbing shoes you can rely on, you get highly breathable footwear with moderate insulation for all-season climate comfort.

INSULATED COMFORT

For mountaineering, ice climbing, alpine sports and other activities in which you're out in colder temperatures for longer, GORE-TEX® footwear for cold conditions features an integrated layer of breathable insulation. That added comfort and support means you can achieve more even in extreme winter conditions.

DURABLY WATERPROOF

Reliable, innovative waterproofness that keeps your feet dry – guaranteed.

WARM OUTDOORS*

GORE-TEX® footwear with insulated technology features a specific layer of breathable insulation to keep you warmer, for longer, when the temperature drops.

OPTIMIZED BREATHABILITY

Our innovative technologies are integrated into the shoe for optimized breathability, allowing moisture to escape to stay comfortable any season, any weather.

* Only in insulated GORE-TEX® footwear.

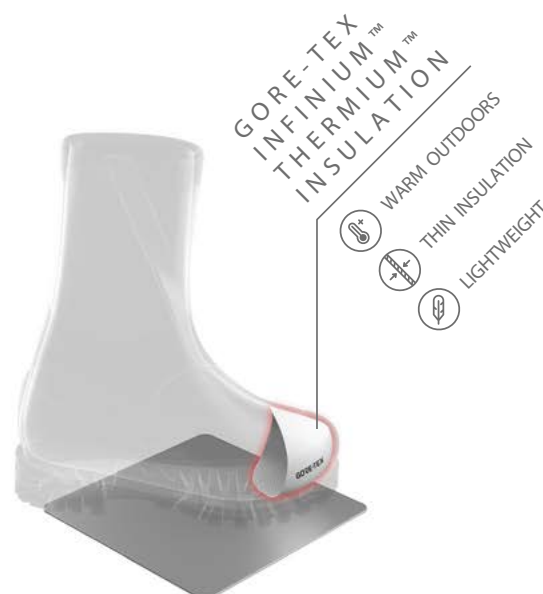

INFINIUM™ THERMIUM™

PATENTED INSULATION

The innovative, ultra-thin insulation provides warmth comparable to existing, bulky insulations. It is a perceivable improvement and validated in cold chamber tests.

TARGETED INSULATION

The insulation is designed around human physiology to put just the right amount of insulation where it's needed. Toes are the first part of the foot to lose heat, causing you to feel cold. The strategically placement only around your toes provide the thermal balance needed for your feet to stay warm outdoors, without getting too warm inside.

Mountaineering SHOES CHART

HIGH MOUNTAIN

INSULATION | INNOVATION

The most advanced technical and innovative creativity has been applied to highly specific footwear, aimed at an extremely demanding consumer. Thermal insulation, lightness and protection are all key features that form the base of all La Sportiva's developments in this area.

nepal

PROTECTION | DURABILITY

The most iconic range within the whole of La Sportiva. Its design and leather uppers convey our heritage and the great craftsmanship required to make these products, while the technical solutions, protection against the weather and performance reflect our innovation and high-tech approach.

trango

LIGHTNESS | TECHNICALITY

For over 30 years, the Trango range has been the reference point for all technical mountaineers looking for the best performance over technical terrain where precision is an absolute must. Low weight, high-grip compounds and a highly technical fit are all distinctive characteristics of these products.

aeQUILIBRIUM

COMFORT | WALKABILITY

Know-how and innovation are the research foundations for the optimum balance between comfort and technology, lightness and durability.

2H Double Heel™ technology provides the Aequilibrium range with unparalleled walkability, outstanding traction and grip when descending on any kind of terrain as well as excellent cushioning from the innovative SpringLug technology by Vibram®.

HIGH ALTITUDE

High-altitude mountaineering and/or extreme weather conditions.

OLYMPUS MONS CUBE

G2 EVO

TECHNICAL MOUNTAINEERING

Mountaineering with sections of very technical climbing over mixed terrain and with vertical sections with high exposure to the elements. It may even be over snow and ice, requiring the use of an ice axe.

G5 EVO

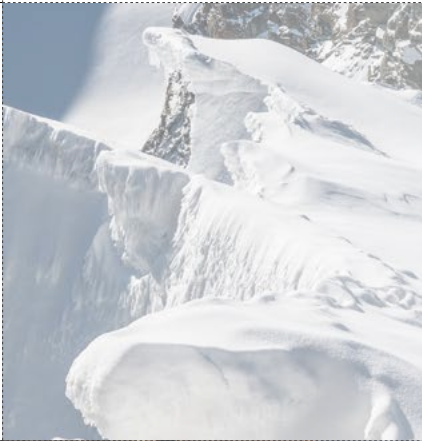

ICE AND MIXED MODERN CLIMBING

Vertical climbing over mixed terrain and ice where the use of crampons and ice axes are required. Goulottes, icefalls and ice walls require the use of highly specialized equipment.

CONSTRUCTION

Double BOA® Fit System for differentiated lacing between the upper and lower part of the internal shell, designed for use with gloves.

The lower BOA® Fit System is directly connected to an internal front gusset that improves the overall water repellence.

Super-clean and seamless thanks to the internal thermo-taping and the innovative **UltraSonic Welding technology** that allows materials to be joined together without stitching.

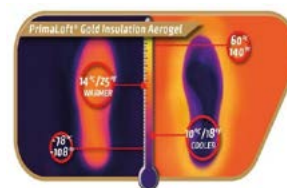

Corner Zip™ that runs along the full length of the gaiter and allows full opening and direct access to the regulation of the internal BOA® Fit System lacing.

PRIMALOFT® GOLD INSULATION AEROGEL

Blocking direct contact from the ground is as important as insulating the body from the cold air.

- + Durable Foil encapsulated Aerogel insulated footbed
- + Vacuum sealed footbed construction
- + Easily glued down or stitched on top of boot or shoe stroble board

Attachment points for the skiamp binding thanks to the inserts that are compatible with tech bindings: ideal for arctic crossing with skis and skins.

Double removable, extremely thermal bootie.

HIGH MOUNTAIN

The non plus ultra of technicality for Himalayan technical mountaineering, arctic crossings and use in extremely cold environments. It adopts the most advanced solutions available on the market to guarantee warmth, lightweight, a quick fit, safety and water repellence for the mountaineer.

BOA

PLUS

- + Extreme lightweight, contained volumes, precise and comfort fit
- + Maximum thermal insulation thanks to the use of a combination of different materials
- + It is the first boot on the market with the attachment points for the skiamp binding thanks to the inserts that are compatible with tech bindings: ideal for arctic crossing with skis and skins (Rear attachment not provided)
- + Combination of Vibram® Litebase and Vibram® MorFlex® Expanded EVA for maximum lightweight, abrasion resistance and thermal insulation

CONSTRUCTION

Lightweight without compromise: each element is designed to contain volumes as much as possible and make the product light

Water-repellent outer gaiter in elasticated, highly durable fabric

Ergonomic, enveloping and precise shape with TPU shells integrated in the toe and heel to reinforce the uppers

Maximum durability and lightweight thanks to the new outsole / midsole package with external Rubber Guard™ shell construction and internal foam material for higher cushioning and lightweight derived from less use of rubber layers

Semi-crampon midsole compatible with semi-automatic crampons in case of ice or snow

Exceptional walkability thanks to the innovative construction of the Double Heel™: the very pronounced double-block rear geometry increases the braking effect downhill and allows a more fluid roll reducing muscle fatigue

3D Flex System Evo™ directional joint with shaped malleolus and external fold lines for better support control and perfect ankle mobility

Lining: Gore-Tex® Performance Comfort, waterproof and breathable

Differentiated lacing for perfect volume adjustment: strap at the top, with BOA® Fit System, integrated in the gaiter, at the bottom

Vibram® sole with Impact Brake System lugs for greater adaptability to hard rock surfaces

* POSSIBLE USE

HIGH ALTITUDE

High-altitude mountaineering and/or extreme weather conditions. Apart from the immense physical demands, these activities require equipment that's suited to the most extreme conditions found in the mountains. Thermal insulation, protection from weather conditions and lightweight boots are key factors in the success of any expedition and the safety of the mountaineer.

TECHNICAL MOUNTAINEERING

Technical activities require appropriate mountaineering skill and optimal physical preparation. Technical mountaineering includes stages of climbing over mixed terrain with vertical sections and high exposure to the elements. One example of high-altitude rock routes or Alpine-style routes is where sections alternate between rock climbing and scaling snow and ice. This is when ice axes are always needed to make progress. In these situations, footwear is technical equipment that's fundamental to any mountaineer's safety and performance. Precision in rock climbing, protection from the weather conditions and lightness are all key drivers for this kind of footwear.

ICE AND MIXED MODERN CLIMBING

Vertical climbing over mixed terrain and ice. This is the perfect combination of technical walking and climbing and demands the use of specialist ice equipment, such as crampons and ice axes. Goulottes, icefalls and ice walls require the use of highly specialized equipment. In this situation, boots must ensure heat insulation, be water repellent and offer maximum protection during the climb, with or without crampons.

TRADITIONAL MOUNTAINEERING

Traditional mountaineering includes the scaling of rocky walls across routes of medium to easy difficulty, the traversing of ridges, climbing icy slopes and walking across snow. This activity generally requires the use of crampons and a single ice axe for climbing over ice. Climbs of varying difficulty may also be included in the route. Ascents using via ferrata and equipped paths may alternate through the hike to the summit. In these cases, the boots' comfort, level of waterproofing and their roll become fundamental to the safe enjoyment of the mountain environment.

ALPINE TREKKING

Trekking at altitude without the need for specific equipment, such as helmets, ropes, ice axes, etc. The paths used may be of varying difficulty and present disconnected sections over various kinds of terrain. If approached during the winter months, this kind of trekking may require the use of traditional crampons or snowshoes. So the ideal footwear ends up being a combination of comfort, stability and protection.

**PUTTING ALL THIS INTO A WINNING
PRODUCT IS THE CHALLENGE WE HAVE
TAKEN ON FOR THE PAST 90 YEARS.**

FOOTWEAR

CLIMBING

The collection offers a different model for each style and climbing technique thanks to the various construction systems, fit and fastenings.

It is in the DNA of the shoes: innovation, sensitivity and precision; and in each climber's dna: passion, genius and a touch of madness.

La Sportiva TECHNOLOGY

S-HEEL

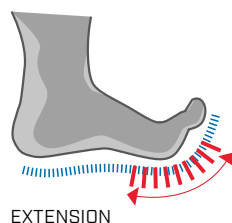

Innovative patent S-Heel™ technology: allows perfect stability in torsion enhancing performance and flexibility for heel blocks.

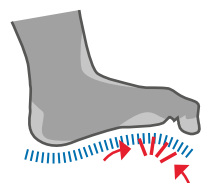

S-HEEL

P3™ PERMANENT POWER PLATFORM

This patented system leaves the arched shape of the climbing shoe unaltered, without compromising original performance and push-power, even after years of hard use.

EXTENSION

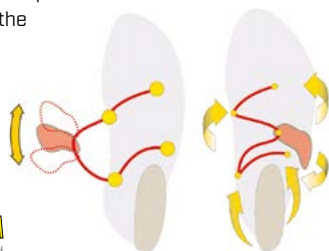

COMPRESSION

P3 SYSTEM III
PERMANENT POWER PLATFORM

FAST LACING SYSTEM®

A patented, highly adjustable lacing system which is quick to use and ensures the perfect fit.

FAST LACING SYSTEM
Patented

FRIXION® RUBBER COMPOUNDS

The **La Sportiva FriXion®** compound is the result of extensive R&D aimed at creating outsoles with parameters of grip and durability that respond to all types of use and terrain. The FriXion® range uses 3 custom formulated compounds for climbing shoes.

FriXion® ECO
Recycled Compound
Ultra sticky compound made from recycled components.

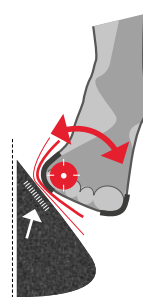

FriXion® BLACK
Climbing Compound
Ultra sticky compound for maximum performance when climbing.

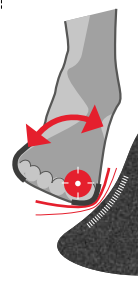

FriXion® WHITE
Super Sticky
Super sticky, leave no trace, long lasting compound. Ideal for high performance mountain running shoes and indoor climbing shoes.

D-TECH™

Dynamic Technology: the sole wraps the shoe sideways for a total absence of side edges and for a perfect dynamic support and spreadability on the most advanced indoor hold shapes. Reduced volume heel, allows for maximum precision on heel hooks.

SENSITIVITY

DYNAMISM

LOCK HARNESS SYSTEM™

A patented technology which creates the perfect harness to support the foot for maximum performance during heel hooks.

VIBRAM® COMPOUNDS

		
DURABILITY	☆☆☆	☆☆☆☆
GRIP	☆☆☆☆	☆☆☆
EDGE	☆☆☆	☆☆☆☆

XS Grip2. Pure friction. The natural evolution of the lead and bouldering world championship-winning compound, XS Grip2 improves upon the superior grip characteristics of XS Grip and delivers outstanding precision of support, shape stability. Suggested use: in climbing conditions **where pure friction is the primary need**. Disciplines: bouldering and lead climbing, indoor and outdoor climbing, extremely smooth, polished roots.

Exceptional grip in every condition.

XS Edge. Edging and durability. Developed for maximum support, XS Edge allows you to focus your weight on the tiniest of holds. Thanks to improved plastic deformation resistance, XS Edge keeps its shape through hours of repeated abuse, whether in hot or cold weather. Suggested use: in climbing conditions **where secure edging is paramount**. Disciplines: lead climbing, bouldering, outdoor and indoor climbing, micro holds and extreme edging.

Optimal balance of performance and durability.

Ultimate climbing. Performance with color. Developed to provide maximum grip on boulder footholds in cold conditions with innovative temperature stability. Unique performance on indoor walls, even under low force loading. Vibram® XS Flash 2 is a non-marking color compound, leaving indoor walls clean of marks while providing all the performance.

PERFORMANCE: NON-MARKING

BENEFITS

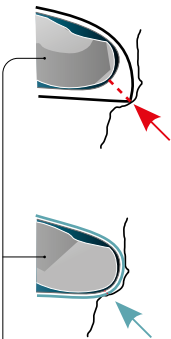

- + Excellent grip on every surface
- + Extreme adaptability to climbing surfaces even with cold condition
- + Non-marking

Markets: overhanging, bouldering, indoor climbing

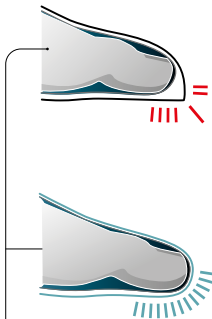

NO-EDGE CONCEPT™

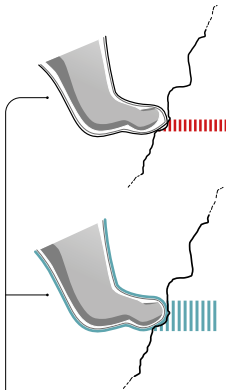

The patented no-edge technology has been developed along three distinct features: **SENSITIVITY, HOMOGENOUS PRESSURE AND ADAPTABILITY.**

SENSITIVITY
Thanks to the reduced layer of rubber, the No-Edge construction system reduces the distance between the foot and the rock surface, enhancing foot sensitivity on holds.

HOMOGENOUS PRESSURE
The absence of any edges allows the foot to exert an homogeneous push on the inner side of the shoe.

ADAPTABILITY
The No-Edge design maximises the surface area in contact with the foot under all conditions.

CLASSIC

NO-EDGE

WOMEN'S CLIMBING SHOES

THE WOMEN VERSIONS OF LA SPORTIVA CLIMBING SHOES, IN ADDITION TO BEING DIFFERENT IN THEIR LOOK, HAVE DIFFERENT TECHNICAL FEATURES THAT MAKE THEM MORE SUITABLE FOR USE BY LIGHTER CLIMBERS

They are made with more lightweight materials, resulting in an extremely flexible and mouldable shoe, capable of adapting to different climbing holds even when less pressure is exerted on them.

Climbing CHART

NARROW FOOT

Shoes designed for narrow feet with toes “sloping” from the big to the little toe, giving the foot a pointed shape and a relatively flat instep.

MEDIUM FOOT

Shoes designed for “normal” feet with a neutral instep, neither narrow nor wide. These shoes are ideal both for narrow and wide feet.

WIDE FOOT

Shoes designed for wider feet, with toes do not “slope”, giving a less pointed shape to the foot but with a more pronounced instep.

SHOES COMPARISON

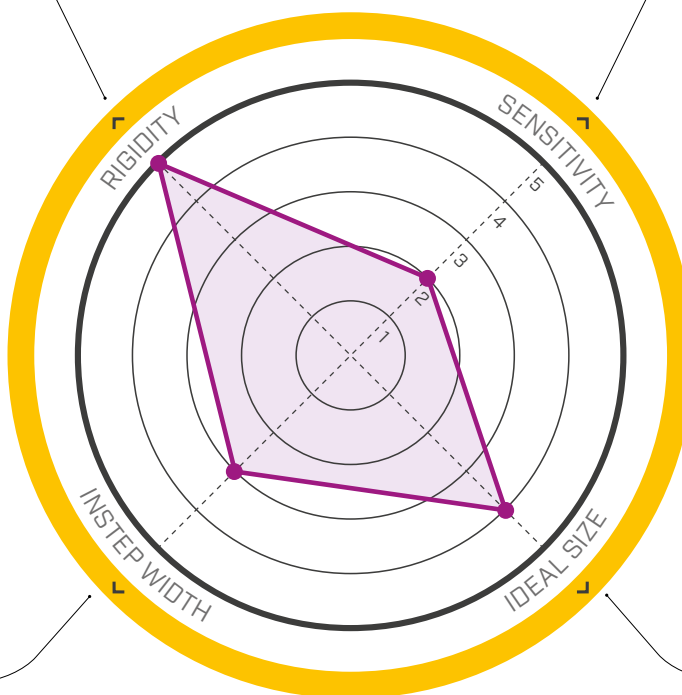

To simplify comparison and achieve the correct choice of the shoe, La Sportiva has developed an info-graphic which summarises the main features.

1

A feature common to more structured shoes. With their rigid sole, they are capable of supporting the climber's weight but adapt less to the different rock types. On a scale of one to five, the graph indicates superior rigidity/support.

2

This feature is common to less structured shoes such as climbing slippers, whose softer sole allows the climber to "feel" the rock beneath his feet, while adapting to different types of hold. On a scale from one to five, these register superior adaptability/sensitivity.

3

On a scale from one to five, these are the growing widths for each model.

4

With this parameter we show how tightly the shoe needs to be worn in order to maintain its performance features. The grades range from 1 to 5: from shoes that must be worn smaller (grade 1) to those that can be worn more "comfortably" (grade 5) to maintain their performance level.

D-TECH

PERFORMANCE

Indoor performance shoe designed for perfect adaptation to the new shapes and volumes of indoor climbing holds. Theory represents the evolution of the species: the extreme sensitivity combined with high dynamism allows for unprecedented spreadability, adherence and reactivity on holds.

D-TECH

RESOLVE ME

- 1 A new construction with the exclusive Dynamic Technology [D-Tech™]: the sole wraps the shoe sideways for a total absence of side edges and for a perfect dynamic support and spreadability on the most advanced indoor hold shapes
- 2 Upper hook&loop closure band for tension adjustment and heel lock
- 3 Reduced volume heel: allows for maximum precision on heel hooks

TECH INFO

Upper: Microfiber and suede uppers with a tubular construction

Lining: None

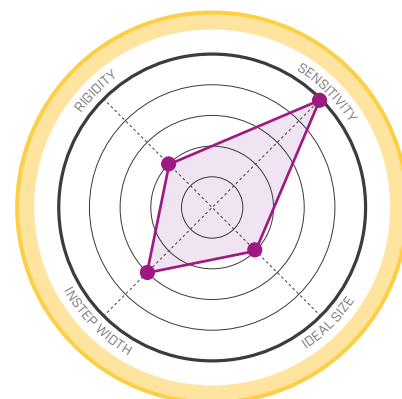

Midssole: P3 System

Patent: P3 System (Permanent Power Platform)

SUSTAINABILITY

- + 100% recycled side heel rubber

PLUS

- + Coming from the study of the prehensile abilities of gorillas and the sensitivity of feline fingertips, this shoe releases maximum power and agility while maintaining maximum sensitivity on each type of hold
- + The Vibram® XS-Grip2 sole with differentiated thickness at the toe favors the prehensibility of the holds
- + The overall structure of the shoe facilitates volume compression on modern indoor routes and adherence on traverses thanks to the high adaptability

P3: PERMANENT POWER PLATFORM; PATENTED SYSTEM ALLOWS THE SHOE TO KEEP ITS DOWNTURNED SHAPE OVER TIME

PERFORMANCE

XS GRIP 2

RESOLE
ME

A sensitive, snug fitting, flexible climbing shoe ideal for top performance both on rock walls and in the gym, designed for use on overhangs and slabs.

- 1 Innovative patent S-Heel™ heel: allows perfect stability in torsion enhancing performance and flexibility for heel blocks
- 2 Protective ultra grippy rubber insert for overhangs
- 3 Top closure hook&loop closure band to regulate tension and the heel block

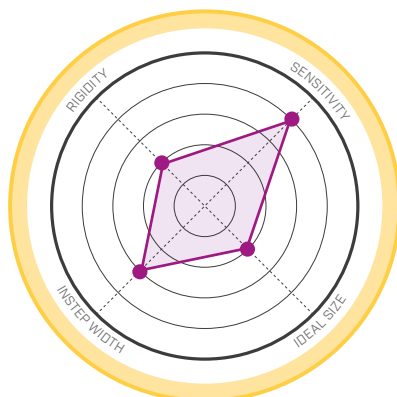

TECH INFO

Upper: Microfiber in combination with suede leather, tubular construction

Lining: Dentex in the back

Midsole: 0.8 mm LaSpoFlex full length midsole + P3 System

Patent: P3 System (Permanent Power Platform)

PLUS

- + The new construction concept combines the advantages of a tight fitting slipper with the precision and volume regulation of a hook&loop closure lacing system shoe
- + Innovative sole construction in two parts, created to enhance longitudinal flexibility it allows the shoe to maintain a perfect stability in torsion enhancing the performance and the adaptability for heel

APPROACH

Each model in this category incorporates optimum technical features without compromising overall comfort.

From the more technical constructions derived from traditional climbing shoes, to the more “hiking oriented” boots, the models in this category have been divided into two separate groups: TRAVERSE X and ACCESS.

PHOTO BY CLAUDIA ZIEGLER

La Sportiva TECHNOLOGY

TRAVERSE X SERIES

Ortholite®
Hybrid™

ULTIMATE ECO-FRIENDLY COMFORT & PERFORMANCE BY ORTHOLITE®

The Traverse X series models use the exclusive **eco-friendly** La Sportiva **insoles** by **OrthoLite® Hybrid**, made using 20% recycled material from the production process. These insoles are designed for both men's and women's feet and the thicknesses and materials differ to suit the weight of the average user.

- Eco-friendly and washable: they contain recycled rubber and are machine-washable.
- Maximum wearing comfort thanks to the insole ventilation and the highly breathable PU foam cells: the foot is always dry and kept at the perfect temperature.
- They facilitate the wicking of sweat thus keeping the foot dry.
- Enhanced durability thanks to the anti-compression technology which keeps material compression down to less than 5% over time.

RESOLE PLATFORM: MORE LIFE TO YOUR SHOES

The **TX2 Evo** and **TX2 Evo Leather** models are designed with a clear **eco-sustainable** objective in mind: to increase the **product's life cycle** and reduce waste as much as possible.

Climbers know it all too well: resoling shoes respects the environment and **revitalises** a product whilst enhancing its performance and adaptability to the foot.

RESOLE ME

RESOLE, RENEW, REUSE

The innovative La Sportiva sole package with Vibram® Idrogrip **outsole, 100% resoleable** thanks to the Resole Platform designed to facilitate each phase of the product's regeneration process carried out by La Sportiva's authorised centres.

Compression EVA with 7% recycled materials from the production process

Resole Platform insert to facilitate resoling operations

COMBO CORD

C2 - Combo Cord™: elastic cords that allows to pack the shoes quickly and compactly inside a backpack or clip to a harness.

TX2 EVO

325
1/2 PAIR

37 - 47.5
+ 1/2

Vibram®
IdroGrip

The lightest shoe in the Traverse X approach series: it meets the needs for grip, protection, minimum volumes and lightweight required in technical approaches and during multi-pitch routes. It adopts a sole package with a 100% resoleable tread that doubles its life cycle and uses recycled materials for a lower environmental impact.

SUSTAINABILITY

- + Knitted upper out of recycled yarn
- + 100% recycled lace
- + Ortholite® Hybrid Approach footbed
- + EVA midsole with 7% recycled content

FOOTWEAR

MOUNTAIN HIKING

The **Mountain Hiking** line is dedicated to those who love to move rapidly and comfortably in the mountains, off the beaten track, in total safety.

X-CURSION

SERIES

Hiking boots ideal for technical terrains, approach and walking session with backpacks.

THE SUSTAINABLE HIKE

TX Hike is the new generation footwear series for fast hiking that's made using eco-compatible materials.

ECO COMPONENTS

- ✓ New BlueSign® certified Gore-Tex® Extended Comfort membrane made with end-of-lifecycle plastics
- ✓ Laces and webbings made using recycled material
- ✓ OrthoLite® Hybrid Mountain Hiking insole with recycled components
- ✓ Vibram® Eco Step Evo outsole made with production swarf
- ✓ Upper and lining made using recycled fabric fibres
- ✓ Compression midsole made with 15% recycled EVA

GORE-TEX® EXTENDED COMFORT WITH RECYCLED CONTENT

OEKO-TEX®
INSPIRING CONFIDENCE

For use in moderate and warmer conditions, or during spells of higher activity where waterproofness and breathability are important. This footwear will not let water in the shoe, but will let sweat vapor escape easily. So you get outstanding heat release and comfort, even if you're moving between indoors and outdoors in warm temperatures.

VIBRAM® ECOSTEP

**REDUCE.
RECYCLE.
THIS IS ECOSTEP.**

- Made from a minimum of 30% recycled rubber
- High-quality compound formulation
- Embodies Vibram's dedication to environmental conservation

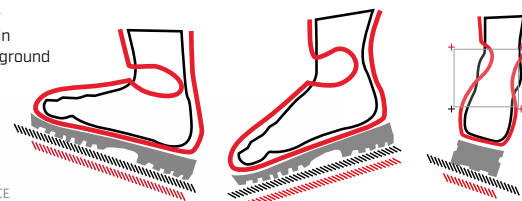

3D FLEX SYSTEM

An innovative multidirectional hinge on the upper allows the ankle to make the most of its natural characteristics without losing stability.

INNOVATIVE SYSTEM 3D FLEX

- Enhanced foot control on difficult terrain
- Larger sole surface in contact with the ground
- Enhanced stability
- Even better fit
- More secure heel

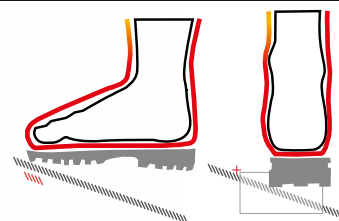

/// TERRAIN /// CONTACT SURFACE

TRADITIONAL SYSTEM

- Traditional heel block
- Stiff ankle = Less stability/Less grip

/// LOWER SURFACE AREA IN CONTACT WITH THE TERRAIN

Ortholite®
Hybrid™

ULTIMATE ECO-FRIENDLY COMFORT & PERFORMANCE BY ORTHOLITE®

The Mountain Hiking models use the exclusive **eco-friendly** La Sportiva insoles by **OrthoLite® Hybrid**, made using 20% Eco content (15% production waste - 5% recycled rubber). These insoles are designed for both men's and women's feet and materials differ to suit the weight of the average user.

- Eco-friendly and washable: they contain recycled rubber and are machine-washable.
- Maximum wearing comfort thanks to the insole ventilation and the highly breathable PU foam cells: the foot is always dry and kept at the perfect temperature.
- They facilitate the wicking of sweat thus keeping the foot dry.
- Enhanced durability thanks to the anti-compression technology.

GORE-TEX® SURROUND®

The first all-round breathable and waterproof hiking shoe

Hiking shoes engineered with Gore-Tex® Surround® product technology are designed for outdoor use in moderate to warmer conditions. They offer enduring waterproof protection and optimum breathability all around the foot. Moisture and warmth also escape through the Gore-Tex® membrane and from there out of the shoe via side ventilation outlets. The result is faster sweat removal rate, keeping your feet dry and comfortable even at higher temperatures.

LA SPORTIVA NANO CELLS™ 2.0

The La Sportiva Mountain Hiking line uses the exclusive Nano-Cells™ technology: breathable cells wrap around the uppers providing structure and allow humidity to be expelled during the dynamic phase.

Aesthetic re-edit of the famous Ultra Raptor model, mountain hiking shoe with Gore-Tex® Extended Comfort membrane, developed for long-distance off-road routes even in the winter months.

PLUS

- + Waterproof and breathable Gore-Tex® Extended Comfort membrane lining
- + Rear stabilizing heel for perfect control on the traverses
- + FriXion® White sole with pronounced Trail Bite Heel for better braking on descents
- + Perfect volume adjustment and foot wrapping thanks to the particular lacing system: the loops are sewn on the inside of the upper and reinforced on the outside with high-frequency reinforcements: this system allows the tension of the lacing to be distributed over the entire upper
- + Also available in comfort WIDE FIT version for hikers with wide feet

TECH INFO

Upper: Abrasion resistant mesh with microfiber reinforcement band with anti-abrasion coating

Lining: Gore-Tex® Extended Comfort

Footbed: Ortholite® Hybrid Mountain Hiking 5 mm

Midssole: Memlex EVA with shock absorbing injection

Mid-cut version of the Ultra Raptor II trail running style, it is ideal for fast hiking and light load excursions. Waterproof and breathable thanks to the Gore-Tex® Extended Comfort membrane.

- 1 Comfort Collar: soft collar to protect the ankle with an easy-fit spoiler that facilitates the fit
- 2 Rear stabilizing heel for perfect control over the traverses
- 3 FriXion® White sole in soft XF compound with pronounced Trail Bite Heel heel for better downhill braking
- 4 Perfect volume adjustment and foot hold thanks to the dedicated lacing elements: the eye-stay webbings are sewn on the inside of the upper and reinforced on the outside with a high frequency TPU skeleton, allowing the lace pull-force to be distributed equally over all areas of the upper

PLUS

- + Waterproof and breathable Gore-Tex® Extended Comfort membrane lining
- + Also available in the WIDE FIT to accommodate different foot-volumes

TECH INFO

MOUNTAIN RUNNING®

Whether it's muddy and uneven ground, uphill running on hard terrain or marathons that last for days: for each challenge a specific product.

PHOTO BY CLAUDIA ZIEGLER

ALL YOU HAVE TO DO IS RUN.

LA SPORTIVA TECHNOLOGY

The technical contents of each La Sportiva model are the fruit of indepth research and development, originating from the constant exchange of information between the R&D department at Ziano di Fiemme (TN) and some

of the world's best athletes. Each shoe is developed using different construction techniques, technologies and technical details which makes each product unique and irreplaceable.

FRI X ION® RUBBER COMPOUNDS

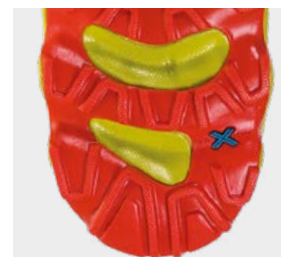

The **La Sportiva FriXion®** compound is the result of extensive R&D aimed at creating outsoles with parameters of grip and durability that respond to all types of use and terrain. The FriXion® range uses 3 custom formulated compounds from Mountain Running to climbing shoes.

FriXion® BLUE

High Durability

Soft, long lasting compound with good grip. Ideal for running on road and track.

FriXion® RED

Dual Mix Compound

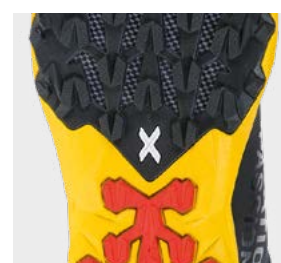

The perfect combination of grip, long lasting wear and shock absorption. Used on versatile, dual density soles.

FriXion® WHITE

Super Sticky

Super sticky, leave no trace, long lasting compound. Ideal for high performance mountain running shoes and indoor climbing shoes.

OUTSOLES

ALL GROUNDS

Versatile soles, ideal for all types of terrain including stone, scree, grass, moss and mud. Ideal for running either in high humidity or on dry ground. Incorporates the **Impact Brake System**.

AKYRA
& AKYRA GTX®

KAPTIVA

BUSHIDO II
& BUSHIDO II GTX®

ULTRA RAPTOR II

AKASHA II

VK BOA®

JACKAL
& JACKAL GTX®

KARACAL

ROCK GROUNDS

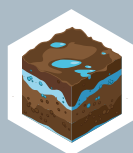

High performance soles indicated for use on hard and rocky ground. They maintain optimum performance levels even on wet ground thanks to the 'VA' lugs used at crucial points on the sole which keep slipping in check on bends. With **Morpho Dynamic Technology**.

HELIOS SR

HELIOS III

MUD GROUNDS

These soles are particularly suited to racing on soft and muddy ground thanks to the width of the shoe and the **distance of the lugs** that make up the sole.

MUTANT

TEMPESTA GTX®
& URAGANO GTX®

LYCAN GTX®
& LYCAN II

CYKLON

CYKLON CROSS
GTX®

BLIZZARD GTX®

ICE GROUNDS

Dedicated to snow and icy terrains, it comes with integrated **AT Grip Fixed Spikes** for maximum grip in any conditions.

IMPACT BRAKE SYSTEM

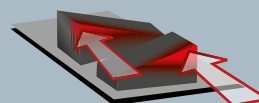

The innovative system is applied to the sole to absorb negative ground impact, help traction and improve grip downhill.

Created and developed by the R&D department at La Sportiva, it offers real advantages during racing by reducing negative ground impact.

The unique position of the lugs allows as many of them as possible to come into contact with the ground, for maximum impact absorption.

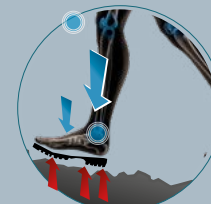

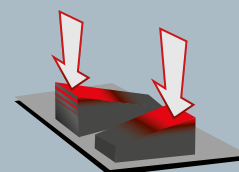

BRAKE

- Enhanced braking effect
- Enhanced traction

IMPACT

- Enhanced shock absorption
- Reduced articulation fatigue

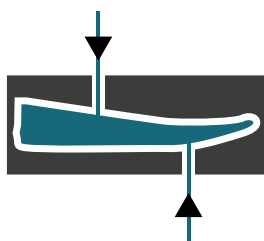

LA SPORTIVA TECHNOLOGY

MIDSOLES

The La Sportiva Mountain Running® footwear adopts **3 different kind of midsoles** depending on the style and on the needed performances.

INJECTED

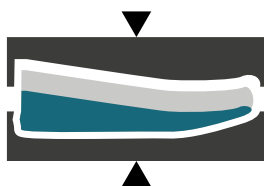

High degree of cushioning and high elasticity of the fabric. These features assist “push off” during the propulsion phase while running, making these models who use injected midsoles, ideal for use on off-road trails. Furthermore, EVA Injected midsole drastically reduce the “squash” effect of the EVA over time, allowing the product to maintain the same features for its entire duration.

LA SPORTIVA INSOLE SYSTEM BY OrthoLite® Hybrid™

The Mountain Running® models use the exclusive **eco-friendly** La Sportiva **insoles** by **OrthoLite® Hybrid**, made using 20% recycled material from the production process. These insoles are designed for both men’s and women’s feet and the thicknesses and materials differ to suit the weight of the average user.

- Eco-friendly and washable: they contain recycled rubber and are machine-washable.
- Maximum wearing comfort thanks to the insole ventilation and the highly breathable PU foam cells: the foot is always dry and kept at the perfect temperature.
- They facilitate the wicking of sweat thus keeping the foot dry.
- Enhanced durability thanks to the anti-compression technology which keeps material compression down to less than 5% over time.

A mountain running shoe ideal for off-road running over ultra distances and workouts on medium distances thanks to the exceptional cushioning guaranteed by the innovative Infinitoo™ high energy return technology.

- 1 Lateral Net-Mesh for maximum ventilation and climate comfort
- 2 Lacing with loops incorporated directly into the sides panels of the upper: facilitates the adaptation of volumes during long distance runs when the foot tends to rise up the volumes

PLUS

- + Comfortable, wide fit designed for ultra-marathons
- + Soft, stretch tongue provides a comfort fit for maximum freedom of movement, the internal bellows construction provides protection against stones and mud
- + Innovative EVA sole/midsole package with internal, shock absorbing, polyurethane pads with high return energy thanks to the Infinitoo™ Technology. The front insert increases cushioning, while the rear insert contributes to the stabilization of the run

TECH INFO

Upper: Sandwich mesh (toe and tongue) + thermo-adhesive TPU reinforcements + side panels in mono-burr Nylon + jersey stretch cuff

Lining: Abrasion resistant micro-fiber

Footbed: Ortholite® Hybrid Mountain Running® Ergonomic 4 mm

Midsole: EVA with polyurethane Infinitoo™ Technology + rock-shield in high density EVA + additional internal cushioning platform

TECH INFO

Upper: Breathable anti-abrasion mesh with thermo-adhesive TPU reinforcements

Lining: Mesh with high abrasion resistance

Footbed: Ortholite® Hybrid Mountain Running® Ergonomic 4 mm

Midsole: Memlex EVA with shock absorbing and double density injection with stabilizer insert

Sole: Frixion® White with Impact Brake System

SUSTAINABILITY

- + Ortholite® Hybrid Mountain Running® Ergonomic 4 mm

- 1 Spyral Tongue™ Evo: comfortably wrapping tongue construction with integrated heel-gaiter, ensuring a precise fit and no open spaces around the ankle; prevents the entry of outside's elements and dynamically follows the runner's movements
- 2 Dynamic Cage™ construction: the BOA® Fit System works in synergy with 3 different elements of the upper for the perfect fit and stability of the foot for a safe and precise downhill run
- 3 The key of the system is the internal Dynamic Flap™ that wraps the shoe and allows dynamic adjustment of the tension of the entire system by acting directly on the BOA® Fit System
- 4 Multi-layer, thermo-adhesive side panel: provides structure and protection
- 5 Lacing taking full advantage based on the BOA® Fit System for perfect and immediate volume adjustment with one-hand movement
- 6 Lightweight dual density EVA Memlex midsole with stabilizing insert ideal for use on traverses

Memlex EVA with shock absorbing and double density injection with stabilizer insert

MOUNTAIN RUNNING SOCKS

SNOWRUN SOCKS

Ideal for cooler temperatures, it comes with the best extra fine Merino wool. A wear resistant structure supports the natural fibres allowing us to have maximum warmth with minimum thickness. A high ankle zone tucks underneath outer clothing layers and Merino's excellent "warmth when wet" characteristics make the Snowrun socks a natural choice for winter running.

ART. 59W 999100
BLACK / YELLOW

SKY SOCKS

The official sock worn by the La Sportiva Mountain Running® Team made with ATHLETICFIT technology and developed for high performance use: gives a snug fit for maximum sensitivity and precision of movement. It is made of lightweight microfiber Dryarn®, durable and always dry on the skin.

PRINTED IN OCTOBER 2021

Every day, we strive to reduce our impact through ethical products and actions. The mountains are our home: sustainability is part of our daily decisions.

We embrace it, since 1928. For your mountain, **for our planet.**

**FOR YOUR MOUNTAIN
FOR OUR PLANET**

FOR **YOUR** MOUNTAIN
